

The Next Generation of Assistive Devices for Hand Weakness

Fiber

Fiber was designed to be a universal fit, meaning it can be configured for all Adult sizes and for the left or right hand. Hominid X is a Massachusetts-based company designing innovative assistive grasping tools

Picture shows a person wearing a fiber and holding a glass

Fiber is a truly versatile grasping tool. It was made sure to design it with the features that matter to users. The products fit both small, large, left, and right hands and have a minimal learning curve, allowing users to quickly grasp items. The products are made from silicone which is easy to clean and washable. It doesn't use electricity, setting them apart from robotic aids that require ongoing power maintenance.
