ABOUT US:

ShortPour Concrete is a new method for purchasing and transporting short loads of concrete. Now consumers can purchase $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$ or $1\frac{3}{4}$ yard loads of concrete at very affordable prices. This concrete is a standard 5-bag mix with 2,500 psi, but can produce up to 8-bag yards if required. Perfect for contractors, home-owners and other entities that need the convenience of pouring smaller concrete projects on their own schedule, without paying outrageous short-load fees from traditional concrete suppliers.

Advantages:

We provide a simple way for residential and commercial users to take advantage of ShortPour Concrete for projects that don't require large amounts of concrete.

Pre-mixed concrete bags... every home center stocks 80lb. bags. It takes 42 bags to create one yard of concrete. The standard mix design of these bags is not very high in cement content and is very labor intensive.

ShortPour Concrete Trailer Specifications

Our trailer systems incorporate a full-time drum rotation system powered by a Honda engine. Unlike other, less-efficient trailer delivery units, ShortPour Concrete drums are constantly rotating, ensuring a consistent concrete mix upon arrival at the work site. Our hydraulic delivery system ensures fast, efficient unloading to speed the job along. You'll be amazed at how simple the process actually is!

Hydraulic surge brakes

**Empty weight 2,440 lbs,
7,000 GVW or 1 cubic yard
capacity**

**Empty weight 2,700 lbs,
10,000 GVW or $1\frac{3}{4}$ cubic
yard capacity**

Precision rotating drum

11/13 H.P. Honda engine

Adjustable tongue

**Standard 2" and $2\frac{5}{16}$ "
ball**

DOT approved

**Hydraulic mix rotation, tilt
and discharge rotation**
