

Low Lake Level July 2016

Courtesy of Henry Storm:

Just to let our homeowners know that Twin Lakes Sub-Division continues to draw water out of the Huron River instead of utilizing their deep well pumps. This practice causes the Huron River to run in reverse, drawing water out of Oxbow Lake. Tull Lake (the Twin Lakes subdivision lake) has been filled to the point it is almost flooding onto the tennis court next to the twin lakes boat access. Please contact our Township, County and State representatives to address this ongoing issue.
