

LOUISIANA/LINCOLN PARISH **TEACHER**

Performance Evaluation Rubric

Revised Sept. 2016

Complete Framework for Teaching Instrument

Domain I	Planning and Preparation
<p>1c: Setting Instructional Outcomes</p>	<p>Teaching is a purposeful activity; even the most imaginative activities are directed towards certain desired learning. Therefore, establishing instructional outcomes entails identifying exactly what students will be expected to learn; the outcomes do not describe what students will do, but what they will learn. The instructional outcomes should reflect important learning and must lend themselves to various forms of assessment so that all students are able to demonstrate their understanding of the content. Insofar as the outcomes determine the instructional activities, the resources used, their suitability for diverse learners, and the methods of assessment employed, they hold a central place in Domain 1.</p> <p>Learning outcomes are of a number of different types: factual and procedural knowledge, conceptual understanding, thinking and reasoning skills, and collaborative and communication strategies. In addition, some learning outcomes refer to dispositions; it's important not only for students to learn to read, but educators also hope that they will like to read. In addition, experienced teachers are able to link their learning outcomes with others both within their discipline and in other disciplines.</p> <p>The elements of component 1c are:</p> <ul style="list-style-type: none"> • Value, sequence, and alignment: Students must be able to build their understanding of important ideas from concept to concept • Clarity: Outcomes must refer to what students will learn, not what they will do, and must permit viable methods of assessment • Balance: Outcomes should reflect different types of learning: such as knowledge, conceptual understanding, and thinking skills • Suitability for diverse students: Outcomes must be appropriate for all students in the class <p>Indicators include:</p> <ul style="list-style-type: none"> • Outcomes of a challenging cognitive level • Statements of student learning, not student activity • Outcomes central to the discipline and related to those in other disciplines • Permit assessment of student attainment • Differentiated for students of varied ability

	Ineffective 1	Effective: Emerging 2	Effective: Proficient 3	Highly Effective 4
1c: Setting Instructional Outcomes	Outcomes represent low expectations for students and lack of rigor, nor do they all reflect important learning in the discipline. Outcomes are stated as activities, rather than as student learning. Outcomes reflect only one type of learning and only one discipline or strand, and are suitable for only some students.	Outcomes represent moderately high expectations and rigor. Some reflect important learning in the discipline, and consist of a combination of outcomes and activities. Outcomes reflect several types of learning, but teacher has made no attempt at coordination or integration. Most of the outcomes are suitable for most of the students in the class based on global assessments of student learning.	Most outcomes represent rigorous and important learning in the discipline. All the instructional outcomes are clear, written in the form of student learning, and suggest viable methods of assessment. Outcomes reflect several different types of learning and opportunities for coordination. Outcomes take into account the varying needs of groups of students.	All outcomes represent rigorous and important learning in the discipline. The outcomes are clear, written in the form of student learning, and permit viable methods of assessment. Outcomes reflect several different types of learning and, where appropriate, represent opportunities for both coordination and integration. Outcomes take into account the varying needs of individual students.
<p>Critical Attributes</p> <p>For each component, a teacher must achieve 100% of the Lincoln Parish attributes (highlighted in gray) and the majority of the remaining attributes.</p>	<ol style="list-style-type: none"> 1. Outcomes lack <u>rigor</u>. 2. Outcomes do not represent <u>important learning</u> in the discipline. 3. Outcomes are not clear or are stated as <u>activities</u>. 4. Outcomes are <u>not suitable</u> for many students in the class. 5. Outcomes <u>are not presented</u> in student-friendly terms. 6. For core subjects, outcomes are <u>not based</u> on Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines 7. No lesson plans <p>7 attributes</p>	<ol style="list-style-type: none"> 1. Outcomes represent a mixture of low <u>expectations and rigor</u>. 2. Some outcomes reflect <u>important learning</u> in the discipline. 3. Outcomes are <u>somewhat clear</u> or are sometimes <u>stated as activities</u> 4. Outcomes are <u>suitable for most</u> of the class. 5. <u>Some outcomes are presented</u> in student-friendly terms. 6. For core subjects, <u>some outcomes are based on</u> Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines <p>6 attributes</p>	<ol style="list-style-type: none"> 1. Outcomes represent high <u>expectations and rigor</u>. 2. Outcomes are related to “<u>big ideas</u>” of the discipline. 3. a. Outcomes are written in terms of <u>what students will learn</u> rather than do. b. Outcomes represent a <u>range of outcomes</u>: factual, conceptual understanding, reasoning, social, management, communication. 4. Outcomes are <u>suitable to groups of students</u> in the class, differentiated where necessary. 5. Outcomes are <u>clearly presented</u> in student-friendly terms 6. For core subjects, <u>outcomes are based on</u> Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines (ELA guidebooks, Social Studies Scope and Sequence, Current Science Standards, Eureka Math) <p>7 attributes</p>	<p><i>In addition to the characteristics of “proficient,”</i></p> <ol style="list-style-type: none"> 1. Teacher plans reference curricular frameworks or blueprints to ensure accurate sequencing. 2. Teacher connects outcomes to <u>previous and future learning</u> 3. <u>Students are able to communicate</u> what they have learned in a variety of ways. 4. Outcomes are <u>differentiated</u> to encourage individual students to take educational risks. 5. <u>Students demonstrate an understanding of what they are going to learn, not what they are going to do, and why they need to learn it.</u> 6. Outcomes <u>support</u> Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines <u>with rigor and fidelity.</u> <p>6 attributes</p>

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
Possible Examples	<ul style="list-style-type: none"> • A learning outcome for a fourth grade class is to make a poster illustrating a poem. • All the outcomes for a ninth grade history class are factual knowledge. • The topic of the social studies unit involves the concept of “revolutions” but the teacher only expects his students to remember the important dates of battles. • Despite having a number of ELL students in the class, the outcomes state that all writing must be grammatically correct. 	<ul style="list-style-type: none"> • Outcomes consist of understanding the relationship between addition and multiplication and memorizing facts. • The outcomes are written with the needs of the “middle” group in mind; however, the advanced students are bored, and some lower level students struggle. 	<ul style="list-style-type: none"> • One of the learning outcomes is for students to “appreciate the aesthetics of 18th century English poetry.” • The outcomes for the history unit include some factual information, as well as a comparison of the perspectives of different groups in the run-up to the Revolutionary War. • The teacher reviews the project expectations and modifies some goals to be in line with students’ IEP objectives. 	<ul style="list-style-type: none"> • The teacher encourages his students to set their own goals; he provides them a taxonomy of challenge verbs to help them strive for higher expectations. • Students will develop a concept map that links previous learning goals to those they are currently working on. • Some students identify additional learning
Possible Evidence Specific to Lincoln Parish:	<ul style="list-style-type: none"> • Written lesson plans available at all times (No lesson plans=ineffective in this component) • I Can statements • Class activities/assignments • Student observation/conversations • Assessments • Differentiated activities • Use of proficiency scales for student grading • Scoring rubrics for assignments, projects, etc. 			

Domain 2: The Classroom Environment

Component	2c: Managing Classroom Procedures
2c: Managing classroom procedures	<p>A smoothly functioning classroom is a prerequisite to good instruction and high levels of student engagement. Teachers establish and monitor routines and procedures for the smooth operation of the classroom and the efficient use of time. Hallmarks of a well-managed classroom are that instructional groups are used effectively, non-instructional tasks are completed efficiently, and transitions between activities and management of materials and supplies are skillfully done in order to maintain momentum and maximize instructional time. The establishment of efficient routines, and teaching students to employ them, may be inferred from the sense that the class “runs itself.”</p> <p>The elements of component 2c are:</p> <ul style="list-style-type: none"> • Management of instructional groups: Teachers help students to develop the skills to work purposefully and cooperatively in groups, with little supervision from the teacher • Management of transitions: Many lessons engage students in different types of activities – large group, small group, independent work. It’s important that little time is lost as students move from one activity to another; students know the “drill” and execute it seamlessly • Management of materials and supplies: Experienced teachers have all necessary materials to hand, and have taught students to implement routines for distribution and collection of materials with a minimum of disruption to the flow of instruction • Performance of non-instructional duties: Overall, little instructional time is lost in activities such as taking attendance, recording the lunch count, or the return of permission slips for a class trip. <p>Indicators include:</p> <ul style="list-style-type: none"> • Smooth functioning of all routines • Little or no loss of instructional time • Students playing an important role in carrying out the routines • Students know what to do, where to move

	Ineffective 1	Effective: Emerging 2	Effective: Proficient 3	Highly Effective 4
2c: Managing classroom procedures	Much instructional time is lost due to inefficient classroom routines and procedures. There is little or no evidence of the teacher managing instructional groups, transitions, and/or the handling of materials and supplies effectively. There is little evidence that students know or follow established routines.	Some instructional time is lost due to only partially effective classroom routines and procedures. The teacher’s management of instructional groups, transitions, and/or the handling of materials and supplies is inconsistent, leading to some disruption of learning. With regular guidance and prompting, students follow established routines.	There is little loss of instructional time due to effective classroom routines and procedures. The teacher’s management of instructional groups and/or the handling of materials and supplies are consistently successful. With minimal guidance and prompting, students follow established classroom routines.	Instructional time is maximized due to efficient classroom routines and procedures. Students contribute to the management of instructional groups, transitions, and/or the handling of materials and supplies. Routines are well understood and may be initiated by students.

<p>Critical Attributes</p> <p style="writing-mode: vertical-rl; transform: rotate(180deg);">For each component, a teacher must achieve 100% of the Lincoln Parish attributes (highlighted in gray) and the majority of the remaining attributes.</p>	<ol style="list-style-type: none"> 1. Students not working with the teacher are <u>disruptive</u> to the class. 2. a. There are <u>no established procedures</u> for distributing and collecting materials. b. Procedures for other activities are confused or chaotic. 3. The teacher <u>fails to implement a classroom discipline plan</u> that is tied to the school-wide discipline plan. 4. There is <u>almost no evidence</u> that behavior intervention plans are implemented for students struggling with the regular classroom discipline plan. 5. <u>Almost no student-teacher relationships</u> reflect positive climate, enthusiasm, and established expectations. <p>6 attributes</p>	<ol style="list-style-type: none"> 1. Small groups are only <u>partially engaged</u> while not working directly with the teacher. 2. a. Procedures for transitions, and distribution/collection of materials, seem to have been <u>established, but their operation is rough</u>. b. Classroom routines function <u>unevenly</u>. c. Some <u>instructional time is lost</u> due to only partially effective classroom routines. d. Inconsistent teacher management leads to <u>disruption of learning</u>. 3. The teacher <u>attempts to implement a classroom discipline plan</u> that is tied to the school-wide discipline plan with minimal parental contact. 4. There is some evidence that behavior intervention plans are implemented for students struggling with the regular classroom discipline plan. 5. <u>Some student-teacher relationships</u> reflect positive climate, enthusiasm, and established expectations. <p>8 attributes</p>	<ol style="list-style-type: none"> 1. The students are <u>productively engaged</u> during small group work. 2. a. Transitions between large and small group activities are smooth. b. Routines for distribution and collection of materials and supplies <u>work efficiently</u>. c. Classroom routines function <u>smoothly</u>. d. Teacher management is <u>consistently successful</u>. 3. The teacher implements a classroom discipline plan that is tied to the school-wide discipline plan, including verbal contact with parents 4. There is <u>evidence</u> that behavior intervention plans are implemented for students struggling with the regular classroom discipline plan 5. <u>Student-teacher relationships</u> reflect positive climate, enthusiasm, and established expectations <p>7 attributes</p>	<p>In addition to the characteristics of “proficient,”</p> <ol style="list-style-type: none"> 1. Students take the initiative with their classmates to ensure that <u>their time is used productively</u>. 2. a. <u>Students themselves ensure</u> that transitions and other routines are accomplished smoothly. b. <u>Students take initiative</u> in distributing and collecting materials efficiently. c. <u>Students contribute to the management of instructional</u> groups, transitions, and or handling of materials and supplies. 3. The teacher implements a classroom discipline plan that is <u>continuously monitored and adjusted to meet student behavior needs</u>. 4. Teacher maintains <u>documented evidence of intervention</u> attempts 5. <u>Student-teacher relationships and student-student relationships</u> reflect positive climate, enthusiasm, and established expectations. <p>7 attributes</p>
---	---	---	--	--

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
Possible Examples	<ul style="list-style-type: none"> When moving into small groups, students are confused as to where they are supposed to go, whether they should take their chairs, etc. There are long lines for materials and supplies or distributing supplies is time-consuming. Students bump into one another lining up or sharpening pencils. Roll-taking consumes much time at the beginning of the lesson and students are not working on anything. Most students ask what they are to do or look around for clues from others. 	<ul style="list-style-type: none"> Some students not working with the teacher are not productively engaged in learning. Transitions between large and small group activities are rough but they are accomplished. Students are not sure what to do when materials are being distributed or collected. Students ask some clarifying questions about procedures The attendance or lunch count consumes more time than it would need if the procedure were more routinized. 	<ul style="list-style-type: none"> Students get started on an activity while the teacher takes attendance. Students move smoothly between large and small group activities. The teacher has an established timing device, such as counting down, to signal students to return to their desks. Teacher has an established attention signal, such as raising a hand, or dimming the lights. One member of each small group collects materials for the table. There is an established color-coded system indicating where materials should be stored. In small group work, students have established roles, they listen to one another, summarize different views, etc. Clean-up at the end of a lesson is fast and efficient. 	<ul style="list-style-type: none"> Students redirect classmates in small groups not working directly with the teacher to be more efficient in their work. A student reminds classmates of the roles that they are to play within the group. A student redirects a classmate to the table s/he should be at following a transition. Students propose an improved attention signal. Students independently check themselves into class on the attendance board.
Possible Evidence Specific to Lincoln Parish:	<ul style="list-style-type: none"> Classroom discipline plan Observations Behavior plans Data related to student behavior and/or behavior plans Participation in school-wide discipline plan Documentation of SBLC or Pupil Appraisal meetings available through SBLC chairperson Students assigned responsibilities to ensure no loss of instructional time and to maximize student engagement Classroom rules posted Seating charts or plans for various groupings Plans for routine procedures Materials are organized and readily accessible to ensure minimal loss of instructional time Minutes for instructional activities are noted on lesson plans 			

Domain 3: Instruction

Component

3b: Using Questioning and Discussion Techniques

Questioning and discussion are the only instructional strategies specifically referred to in the framework for teaching; this reflects their central importance to teachers' practice. But in the framework, it is important that questioning and discussion are used as techniques to deepen student understanding, rather than serving as recitation, or a verbal "quiz." Good teachers use divergent as well as convergent questions, framed in such a way that they invite students to formulate hypotheses, make connections, or challenge previously held views. Students' responses to questions are valued; effective teachers are especially adept at responding to and building on student responses and making use of their ideas. High quality questions encourage students to make connections among concepts or events previously believed to be unrelated, and arrive at new understandings of complex material. Effective teachers also pose questions for which they do not know the answers. Even when a question has a limited number of correct responses, the question, being non-formulaic, is likely to promote thinking by students. Class discussions are animated, engaging all students in important issues and in using their own language to deepen and extend their understanding. They may be based around questions formulated by the students themselves.

Not all questions must be at a high cognitive level in order for a teacher's performance to be rated at a high level; that is, when exploring a topic, a teacher might begin with a series of questions of low cognitive challenge to provide a review, or to ensure that everyone in the class is "on board." Furthermore, if questions are at a high level, but only a few students participate in the discussion, the teacher's performance on the component cannot be judged to be at a high level. In addition, in lessons involving students in small-group work, the quality of the students' questions and discussion in their small groups may be considered as part of this component.

In order for students to formulate high-level questions, they must have learned how to do this. Therefore, high-level questions from students, either in the full class, or in small group discussions, provide evidence that these skills have been taught.

Elements of Component 3b are:

- Quality of questions/prompts: Questions of high quality cause students to think and reflect, to deepen their understanding, and to test their ideas against those of their classmates. When teachers ask questions of high quality, they ask only a few of them, and they provide students with sufficient time to think about their response, to reflect on the comments of their classmates, and to deepen their understanding. Occasionally, for the purposes of review, teachers ask students a series of (usually low-level) questions in a type of verbal quiz. This may be helpful for the purpose of establishing the facts of an historical event, for example, but they should not be confused with the use of questioning to deepen students' understanding.
- Discussion techniques: Effective teachers promote learning through discussion. Some teachers report that "we discussed x" when what they mean is that "I said x." That is, some teachers confuse discussion with explanation of content; as important as that is, it's not discussion. Rather, in a true discussion, a teacher poses a question, and invites all students' views to be heard, and enabling students to engage in discussion directly with one another, not always mediated by the teacher.
- Student participation: In some classes a few students tend to dominate the discussion, other students, recognizing this pattern, hold back their contributions. Teacher uses a range of techniques to ensure that all students contribute to the discussion, and enlist the assistance of students to ensure this outcome.

Indicators include:

- Questions of high cognitive challenge, formulated by both students and teacher
- Questions with multiple correct answers, or multiple approaches even when there is a single correct response
- Effective use of student responses and ideas
- Discussion with the teacher stepping out of the central, mediating role
- High levels of student participation in discussion

	Ineffective 1	Effective: Emerging 2	Effective: Proficient 3	Highly Effective 4
3b: Using questioning/ prompts and discussion	Teacher's questions are of low cognitive challenge, single correct responses, and asked in rapid succession. Interaction between teacher and students is predominantly recitation style, with the teacher mediating all questions and answers. A few students dominate the discussion.	Teacher's questions lead students through a single path of inquiry, with answers seemingly determined in advance. Alternatively the teacher attempts to frame some questions designed to promote student thinking and understanding, but only a few students are involved. Teacher attempts to engage all students in the discussion and to encourage them to respond to one another, with uneven results.	While the teacher may use some low-level questions, he or she poses questions to students designed to promote student thinking and understanding. Teacher creates a genuine discussion among students, providing adequate time for students to respond, and stepping aside when appropriate. Teacher successfully engages most students in the discussion, employing a range of strategies to ensure that most students are heard.	Teacher uses a variety or series of questions or prompts to challenge students cognitively, advance high level thinking and discourse, and promote meta-cognition. Students formulate many questions, initiate topics and make unsolicited contributions. Students themselves ensure that all voices are heard in the discussion.
Critical Attributes For each component, a teacher must achieve 100% of the Lincoln Parish attributes (highlighted in gray) and the majority of the remaining attributes.	<ol style="list-style-type: none"> a. Questions are rapid-fire, and convergent, with a <u>single correct answer</u>. b. Questions <u>do not invite student thinking</u>. a. All discussion is between teacher and students; <u>students are not invited to speak directly to one another</u>. b. A <u>few students dominate</u> the discussion. <p>4 attributes</p>	<ol style="list-style-type: none"> a. Teacher's questions lead students through a <u>single path of inquiry, with answers seemingly determined in advance</u>. b. Teacher frames <u>some questions designed to promote student thinking</u>, but only a few students are involved. a. The teacher <u>invites students to respond</u> directly to one another's ideas, <u>but few students respond</u>. b. Teacher calls on many students, but only a <u>small number actually participate</u> in the discussion. <p>4 attributes</p>	<ol style="list-style-type: none"> a. Teacher uses <u>open-ended questions</u>, inviting students to think and/or have <u>multiple possible answers</u>. b. The teacher makes effective use of <u>wait time</u>. a. The teacher <u>builds on/ uses student responses</u> to questions effectively. b. Discussions enable <u>students to talk to one another</u>, without ongoing mediation by the teacher. (Chat Chart/Talk Moves guides classroom discussions daily.) c. The teacher <u>calls on most students</u>, even those who don't initially volunteer. d. <u>Many students actively engage</u> in the discussion. <p>6 attributes</p>	<p><i>In addition to the characteristics of "proficient,"</i></p> <ol style="list-style-type: none"> a. Teacher uses a <u>variety or series of questions or prompts</u> to challenge students cognitively and advance higher level of thinking. b. <u>Students initiate higher-order questions</u>. a. <u>Students extend the discussion</u>, enriching it. b. <u>Students invite</u> comments from their classmates during a discussion. <p>4 attributes</p>

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
Possible Examples	<ul style="list-style-type: none"> All questions are of the “recitation” type, such as “What is 3 x 4?” The teacher asks a question for which the answer is on the board; students respond by reading it. The teacher only calls on students who have their hands up. 	<ul style="list-style-type: none"> Many questions are of the “recitation” type, such as “How many members of the House of Representatives are there?” The teacher asks: “Who has an idea about this?” but the same three students offer comments. The teacher asks: “Michael, can you comment on Mary’s idea?” but Michael does not respond, or makes a comment directly to the teacher. 	<ul style="list-style-type: none"> The teacher asks: “What might have happened if the colonists had not prevailed in the American war for independence?” The teacher uses plural the form in asking questions, such as: “What are some things you think might contribute to...?” The teacher asks: “Michael, can you comment on Mary’s idea?” and Michael responds directly to Mary. The teacher asks a question and asks every student to write a brief response, then share with a partner before inviting a few to offer their ideas to the entire class. 	<ul style="list-style-type: none"> A student asks “How many ways are there to get this answer?” A student says to a classmate: “I don’t think I agree with you on this, because....” A student asks of other students: “Does anyone have another idea as to how we might figure this out?” A student asks “What if...?”
Possible Evidence Specific to Lincoln Parish:	<ul style="list-style-type: none"> Observations Use of CHAT Chart/Talk Moves Teacher questions Student-to-student discussions Higher order questions recorded on lesson plans 			

Component	3c: Engaging Students in Learning
<p>Student engagement in learning is the centerpiece of the framework for teaching; all other components contribute to it. When students are engaged in learning, they are not merely “busy,” nor are they only “on task.” Rather, they are intellectually active in learning important and challenging content. The critical distinction between a classroom in which students are compliant and busy, and one in which they are engaged, is that in the latter students are developing their understanding through what they do. That is, they are engaged in discussion, debate, answering “what if?” questions, discovering patterns, and the like. They may be selecting their work from a range of (teacher arranged) choices, and making important contributions to the intellectual life of the class. Such activities don’t typically consume an entire lesson, but they are essential components of engagement.</p> <p>A lesson in which students are engaged usually has a discernible structure: a beginning, a middle, and an end, with scaffolding provided by the teacher or by the activities themselves. Student tasks are organized to provide cognitive challenge, and then students are encouraged to reflect on what they have done and what they have learned. That is, there is closure to the lesson, in which students derive the important learning from their own actions. A critical question for an observer in determining the degree of student engagement is “What are the students being asked to do?” If the answer to that question is that they are filling in blanks on a worksheet, or performing a rote procedure, they are unlikely to be cognitively engaged.</p> <p>In observing a lesson, it is essential not only to watch the teacher, but also to pay close attention to the students and what they are doing. The best evidence for student engagement is what students are saying and doing as a consequence of what the teacher does, or has done, or has planned.</p> <p>Elements of Component 3c are:</p> <ul style="list-style-type: none"> • Activities and assignments: The activities and assignments are the centerpiece of student engagement, since they determine what it is that students are asked to do. Activities and assignments that promote learning are aligned with the goals of the lesson, and require student thinking that emphasizes depth over breadth, and that may allow students to exercise some choice. • Grouping of students: How students are grouped for instruction is one of the many decisions teachers make every day. There are many options; students of similar background and skill may be clustered together, or the more advanced students may be spread around into the different groups. Alternatively, a teacher might permit students to select their own groups, or they could be formed randomly. • Instructional materials and resources: The instructional materials a teacher selects to use in the classroom can have an enormous impact on students’ experience. While some teachers are obliged to use a school or district’s officially sanctioned materials, many teacher use these selectively or supplement them with others of their choosing that are better suited to engaging students in deep learning, for example, the use of primary source materials in social studies. • Structure and pacing: No one, whether adults or students, likes to be either bored or rushed in completing a task. Keeping things moving, within a well-defined structure, is one of the marks of an experienced teacher. And since much of student learning results from their reflection on what they have done, a well-designed lesson includes time for reflection and closure. <p>Indicators include:</p> <ul style="list-style-type: none"> • Activities aligned with the goals of the lesson • Student enthusiasm, interest, thinking, problem-solving, etc • Learning tasks that require high-level student thinking and are aligned with lesson objectives • Students highly motivated to work on all tasks and are persistent even when the tasks are challenging • Students actively “working,” rather than watching while their teacher “works.” • Suitable pacing of the lesson: neither dragging nor rushed, with time for closure and student reflection 	

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
3c: Engaging students in learning	The learning tasks and activities, materials, resources, instructional groups and technology are poorly aligned with the instructional outcomes, or require only rote responses. The pace of the lesson is too slow or rushed. Few students are intellectually engaged or interested.	The learning tasks or prompts are partially aligned with the instructional outcomes but require only minimal thinking by students, allowing most students to be passive or merely compliant. The pacing of the lesson may not provide students the time needed to be intellectually engaged.	The learning tasks and activities are aligned with the instructional outcomes and are designed to challenge student thinking, resulting in active intellectual engagement by most students with important and challenging content, and with teacher scaffolding to support that engagement. The pacing of the lesson is appropriate, providing most students the time needed to be intellectually engaged.	Virtually all students are intellectually engaged in challenging content, through well-designed learning tasks, and suitable scaffolding by the teacher, and fully aligned with the instructional outcomes. In addition, there is evidence of some student initiation of inquiry, and student contributions to the exploration of important content. The pacing of the lesson provides students the time needed to intellectually engage with and reflect upon their learning, and to consolidate their understanding. Students may have some choice in how they complete tasks and may serve as resources for one another.

	Ineffective 1	Effective: Emerging 2	Effective: Proficient 3	Highly Effective 4
<p>Critical Attributes</p> <p>For each component, a teacher must achieve 100% of the Lincoln Parish attributes (highlighted in gray) and the majority of the remaining attributes.</p>	<ol style="list-style-type: none"> a. Few students are intellectually engaged in the lesson. b. Student engagement with the content is largely <u>passive</u>, learning primarily facts or procedures. Learning tasks require only <u>recall</u> or have a single correct response or method. <u>Only one type</u> of instructional group is used (whole group, small groups) when variety would better serve the instructional purpose. a. Instructional materials used are <u>unsuitable</u> to the lesson and/or the students. b. The materials used ask students only to perform <u>rote tasks</u> The <u>lesson</u> drags or is rushed. Activities, tasks, resources, materials, etc. are <u>NOT aligned</u>. <u>Little to no implementation</u> of Lincoln Parish CIA (Curriculum, Instruction, and Assessment) <u>Fails to provide student-specific interventions (RTI)</u> for students failing to meet the standards <p>10 attributes</p>	<ol style="list-style-type: none"> <u>Some students</u> are intellectually engaged in the lesson. a. Learning tasks are a <u>mix of those requiring thinking and recall</u>. b. Students have <u>no choice</u> in how they complete tasks. The teacher uses different instructional groupings; these are <u>partially successful</u> in achieving the lesson objectives. The materials and resources are <u>partially aligned</u> to the lesson objectives, only some of them demanding student thinking. The pacing of the lesson is <u>uneven</u>; suitable in parts, but rushed or dragging in others. Activities, tasks, resources, materials, etc. are <u>partially aligned</u> <u>Implementation of Lincoln Parish CIA</u> (Curriculum, Instruction, and Assessment) <u>Occasionally provides student-specific interventions (RTI)</u> for students failing to meet the standards <p>9 attributes</p>	<ol style="list-style-type: none"> <u>Most students</u> are intellectually engaged in the lesson. a. Learning tasks have <u>multiple correct responses or approaches and/or demand higher order thinking</u>. b. <u>Students have some choice</u> in how they complete learning tasks. There is a <u>mix of different types</u> of groupings, suitable to the lesson objectives. Materials and resources <u>support</u> the learning goals and require intellectual engagement, as appropriate. The pacing of the lesson <u>provides students the time needed</u> to be intellectually engaged. The learning tasks AND activities are <u>aligned</u> with instructional outcomes. <u>Successful implementation of Lincoln Parish CIA</u> (Curriculum, Instruction, and Assessment) <u>Provides with fidelity student-specific viable interventions (RTI)</u> for students failing to meet the standards <p>9 attributes</p>	<p><i>In addition to the characteristics of “proficient,”</i></p> <ol style="list-style-type: none"> Virtually <u>all students</u> are highly engaged in the lesson. a. <u>Students take initiative to modify a learning task</u> to make it more <u>meaningful or relevant to their needs</u> (including <u>modifications to grouping and materials</u>). b. Students have <u>extensive choice</u> in how they complete tasks. (<i>includes 3,4, & 6</i>) Students have an <u>opportunity for reflection and closure</u> on the lesson to consolidate their understanding. <u>Documented student growth</u> is evident through <u>successful implementation of Lincoln Parish CIA</u> (Curriculum, Instruction, and Assessment) <u>Develops and implements a classroom RTI plan that is consistently monitored and adjusted as needed</u>. <p>6 attributes</p>

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
Possible Examples	<ul style="list-style-type: none"> • Students are able to fill out the lesson worksheet without understanding what it's asking them to do. • The lesson drags, or feels rushed. • Students complete “busy work” activities. 	<ul style="list-style-type: none"> • Students are asked to fill in a worksheet, following an established procedure. • There is a recognizable beginning, middle, and end to the lesson. • Parts of the lesson have a suitable pace; other parts drag or feel rushed. 	<ul style="list-style-type: none"> • Students are asked to formulate a hypothesis about what might happen if the American voting system allowed for the direct election of presidents. • Students are given a task to do independently, then to discuss with a table group, followed by a report-out from each table. • There is a clear beginning, middle, and end to the lesson. • The lesson is neither rushed 	<ul style="list-style-type: none"> • Students are asked to write an essay “in the style of Hemingway.” • A student asks whether they might remain in their small groups to complete another section of the activity, rather than work independently. • Students identify or create their own learning materials. • Students summarize their learning from the lesson.
Possible Evidence Specific to Lincoln Parish:	<ul style="list-style-type: none"> • Benchmark assessments (DIBELS, STAR Reading & Math, writing benchmarks, Eureka, district created benchmarks) • Guidebook assessments and tasks • Anchor charts • Observations • Formative & summative assessments • Classroom RTI Plan • RTI data • Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines • Math – conceptual understanding, procedural skill, fluency, and application • Interactive read alouds - purposeful talk, anchor charts, genre study • Literacy stations – library, writing, teacher-led groups • Writing Workshop – mini lesson, extended writing, conferencing • NMSI • LDC, MDC 			

Component	3d: Using Assessment in Instruction
------------------	--

Assessment of student learning plays an important role in instruction; no longer does it signal the end of instruction; it is now recognized to be an integral part of instruction. While assessment of learning has always been and will continue to be an important aspect of teaching (it's important for teachers to know whether students have learned what they intend) assessment for learning has increasingly come to play an important role in classroom practice. And in order to assess student learning for the purposes of instruction, teachers must have their finger on "the pulse" of a lesson, monitoring student understanding and, where appropriate, offering feedback to students.

Of course, a teacher's actions in monitoring student learning, while it may superficially look the same as monitoring student behavior, has a fundamentally different purpose. When a teacher is monitoring behavior, he/she is alert to students who may be passing notes, or bothering their neighbors; when teachers monitor student learning, they look carefully at what students are writing, or listen carefully to the questions students ask, in order to gauge whether they require additional activity or explanation in order to grasp the content. In each case, the teacher may be circulating in the room, but his/her purpose in doing so is quite different in the two situations.

Similarly, on the surface, questions asked of students for the purpose of monitoring learning, are fundamentally different from those used to build understanding; in the former, teachers are alert to students' revealed misconceptions, whereas in the latter the questions are designed to explore relationships, or deepen understanding. Indeed, for the purpose of monitoring, many teachers create questions specifically to elicit the extent of student understanding, and use techniques (such as exit tickets) to ascertain the degree of understanding of every student in the class. Indeed, encouraging students (and actually teaching them the necessary skills) of monitoring their own learning against clear standards is demonstrated by teachers at high levels of performance. In this component.

But as important as monitoring of student learning and providing feedback to students are, however, they are greatly strengthened by a teacher's skill in making mid-course corrections when needed, seizing on a "teachable moment."

Elements of Component 3d are:

- **Assessment Criteria:** It is essential that students know the criteria for assessment. At its highest level, students themselves have had a hand in articulating the criteria for, for example, a clear oral presentation.
- **Monitoring of student learning:** A teacher's skill in eliciting evidence of student understanding is one of the true marks of expertise. This is not a hit-or-miss effort, but is planned carefully in advance. But even after carefully planning, monitoring of student learning must be woven seamlessly into the lesson, using a variety of techniques.
- **Feedback to students:** Feedback on learning is an essential element of a rich instructional environment; without it, students are constantly guessing as to how they are doing, and how their work can be improved. Valuable feedback must be timely, constructive, and substantive, and provide students the guidance they need to improve their performance.
- **Student self-assessment and monitoring of progress:** The culmination of student assumption of responsibility for their learning is when they monitor their own learning, and take appropriate action. Of course, they can only do this if the criteria for learning are clear and if they have been taught the skills of checking their work against clear criteria.

Indicators include:

- Teacher paying close attention to evidence of student understanding
- Teacher posing specifically-created questions to elicit evidence of student understanding
- Teacher circulating to monitor student learning and to offer feedback
- Students assessing their own work against established criteria
- Teacher adjusting instruction in response to evidence of student understanding (or lack of it)

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
3d: Using Assessment in Instruction	There is little or no assessment or monitoring of student learning; feedback is absent, or of poor quality. Students do not appear to be aware of the assessment criteria and do not engage in self-assessment.	Assessment is used sporadically to support instruction, through some monitoring of progress of learning by teacher and/or students. Feedback to students is general, and students appear to be only partially aware of the assessment criteria used to evaluate their work but few assess their own work. Questions/prompts/assessments are rarely used to diagnose evidence of learning.	Assessment is regularly used during instruction, through monitoring of progress of learning by teacher and/or students, resulting in accurate, specific feedback that advances learning. Students appear to be aware of the assessment criteria; some of them engage in self-assessment. Questions/prompts/assessments are used to diagnose evidence of learning.	Assessment is fully integrated into instruction, through extensive use of formative assessment. Students appear to be aware of, and there is some evidence that they have contributed to, the assessment criteria. Students self-assess and monitor their progress. A variety of feedback, from both the teacher and peers, is accurate, specific, and advances learning. Questions/prompts/assessments are used regularly to diagnose evidence of learning by individual students.

<p>Critical Attributes</p> <p>For each component, a teacher must achieve 100% of the Lincoln Parish attributes (highlighted in gray) and the majority of the remaining attributes.</p>	<ol style="list-style-type: none"> 1. The <u>teacher gives no indication</u> of what high quality work looks like. 2. The <u>teacher makes no effort</u> to determine whether students understand the lesson. 3. Feedback is only global. 4. The <u>teacher does not ask students to evaluate</u> their own or classmates' work. 5. The teacher makes <u>no attempt to adjust the lesson</u> or attempts are not <u>successful</u> 6. Assessments are <u>not aligned</u> to the Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines and do not meet the rigor and structure of state assessments. <p>6 attributes</p>	<ol style="list-style-type: none"> 1. There is <u>little evidence</u> that the students understand how their work will be evaluated. 2. a <u>Teacher monitors understanding</u> through a single method, or without eliciting evidence of understanding from all students. b Teacher <u>requests global indications</u> of student understanding. 3. Feedback to students is <u>not uniformly specific</u>, not oriented towards future improvement of work. 4. The teacher makes <u>only minor attempts</u> to engage students in self- or peer-assessment. 5. The teacher's attempts to adjust the lesson are <u>partially successful</u>. 6. <u>Some assessments are aligned</u> to the Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines and mirror the rigor and structure of state assessments. <p>7 attributes</p>	<ol style="list-style-type: none"> 1. Students indicate that <u>they clearly understand</u> the characteristics of high quality work. 2. The <u>teacher elicits evidence</u> of student understanding during the lesson. <u>Students are invited to assess their own work</u> and make improvements. 3. Feedback includes <u>specific and timely guidance</u> for at least groups of students. 4. The teacher <u>attempts to engage</u> students in self- or peer-assessment. 5. <u>When necessary, the teacher makes adjustments to the lesson</u> to enhance understanding by groups of students. 6. Assessments are <u>aligned</u> to the Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines and mirror the rigor and structure of state assessments. <p>6 attributes</p>	<p><i>In addition to the characteristics of "proficient,"</i></p> <ol style="list-style-type: none"> 1. There is evidence that <u>students have helped establish</u> the evaluation criteria. 2. a Teacher monitoring of student understanding is sophisticated and continuous: <u>the teacher is constantly "taking the pulse" of the class</u>. b Teacher makes <u>frequent use of strategies</u> to elicit information about individual student understanding. c. <u>Students monitor their own understanding</u>, either on their own initiative or as a result of tasks set by the teacher. 3. Feedback to students is <u>specific and timely, and is provided from many sources, including other students</u>. 4. <u>All students are engaged in self- and/or peer-assessment</u>. 5. The teacher's adjustments to the lesson are <u>designed to assist individual students</u>. 6. Assessments are aligned to the Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines, mirror the rigor and structure of state assessments, and <u>the teacher supports in and follows the development of standards-based grading and common assessments</u>.

	Ineffective	Effective: Emerging	Effective: Proficient	Highly Effective
Possible Examples	<ul style="list-style-type: none"> • A student asks: “How is this assignment going to be graded?” • A student asks “Does this quiz count towards my grade?” • The teacher forges ahead with a presentation without checking for understanding. • The teacher says: “good job, everyone.” 	<ul style="list-style-type: none"> • Teacher asks: “Does anyone have a question?” • When a student completes a problem on the board, the teacher corrects the student’s work without explaining why. • The teacher, after receiving a correct response from one student, continues, without ascertaining whether all students understand the concept. 	<ul style="list-style-type: none"> • The teacher circulates during small group or independent work, offering suggestions to groups of students. • The teacher uses a specifically formulated question to elicit evidence of student understanding. • The teacher asks students to look over their papers to correct their errors. 	<ul style="list-style-type: none"> • The teacher reminds students of the characteristics of high-quality work (the assessment criteria), suggesting that the students themselves helped develop them. • While students are working, the teacher circulates providing substantive feedback to individual students. • The teacher uses popsicle sticks or exit tickets to elicit evidence of individual student understanding. • Students offer feedback to their classmates on their work. • Students evaluate a piece of their writing against the writing rubric and confer with the teacher about how it could be improved.
Possible Evidence Specific to Lincoln Parish:	<ul style="list-style-type: none"> • Student assessments • Observation • Rubrics • Implementation or practice of standards-based report cards • Specific, actionable feedback to students • From a variety of sources (formative and summative assessments, informal observations, checklist, conferencing, peer and self-assessment) • Use of proficiency scales for scoring student work • Math sprints, exit tickets • Lincoln Parish Curriculum, Instruction, and Assessment (CIA) Guidelines • Development of common assessments by grade & subject • Teacher analysis of assessment data & plan for re-teaching
