

# REVELATION 12 DRAGON SATELLITES

In researching this aspect of the time and place of the Revelation 12 Sign Moonset, it became clear that this was an instance where life or reality appears to be imitating art or that of 'prophetic art' in this case. There are many questions still asked concerning the Revelation 12 Sign and even more so the 2nd sign, that of the Dragon. Some suggest it is allegorical, others that it could be Planet X or that it is the Stars of *Serpens* that configures this 2nd Sign, etc. As it remains to be ascertained, one astonishing correlation is what occurs on the precise time of the Moonset of the Revelation 12 Sign event from the perspective of Jerusalem facing west at the Temple Mount. Based on the software models of *Stellarium*; there are 7 main satellites that cross the path of *Virgo* as the Moon is 'under her feet' and sets on the western horizon as the Revelation 12 Sign concludes. The 7 satellites have their orbits depicted from left to right as one looks across the western horizon of the night sky. What the study will consider besides the *Ecliptic* line is the *Galactic Equator* line that amazingly bisects the constellation of *Virgo*. The *Galactic Equator* is the halfway point between the top and bottom of the *Milky Way* galaxy disk. It is noted that there are 100s of satellites in orbit at any given time but only those that immediately cross the sky at the time of the Moonset are considered. The satellites only considered are those within just an approximate 5-minute span not to exceed 8:53 PM from the point of the Moonset.

As there are 10 Horns in the Revelation 12 2nd Sign of the Dragon, amazingly, there are 3 other satellites that have a slightly different trajectory and these 3 all converge at one approximate area of the sky, the *Galactic Equator*. Astonishing, as mentioned the satellite names are *Dragon*, *Timed* and *NOAA*. However, the odds of having these particular orbits of the 3 satellites in question converging at the same time in front of *Virgo* when the Revelation 12 Sign concluded and on the precise time the Moon sets in Jerusalem that mirrors the Dragon 2nd Sign is

As there are 7 Heads to the supposed Dragon of Revelation 12, so are there 7 satellites that move across a parallel corridor that pass *Virgo's* feet within this 5-minute after the Moonset. The following data will show the time of the Moonset in Jerusalem on the day of the Revelation 12 astronomical alignment. The data will also list the 10 satellites that will pass *Virgo* just a few minutes after Moonset. The list will also delineate the 3 other satellites, that of the *Dragon*, *NOAA* and *Timed*. The times will show when the respective satellites will cross the *Galactic Equator* that is in

What this study has found is that certain satellite orbits converge at the end of the Sign. Specifically, there are 3 satellites orbits that all conjoin or intersect; that of the *Dragon*, *NOAA* and *Timed*. This satellite convergence appears to be unique to the Revelation 12 2nd Sign that alludes to a 'Dragon' having 7 Heads and 10 Horns. Astonishingly, this same depiction appears to match the convergence of 10 satellites that will converge on *Virgo* within approximately the 5-minutes timespan of the Moon setting. Allowing for some poetic license in inferencing such an occurrence, the study only wishes to fuse fact with faith, and merge Science with Scripture. Consider the following.
