

# Machine Learning & AI with Python

## Contents

- Installing Anaconda
- Create a New Environment
- Navigating the Spyder & Jupyter Notebook Interface
- Downloading the IRIS Datasets
- Data Exploration and Analysis
- Presenting Your Data
- Getting Started

## Regression

- Categories of Machine Learning
- Machine Learning Basic Concepts
- Working with Scikit-Learn
- Housing Data - EDA
- Correlation Analysis and Feature Selection
- Simple Linear Regression Modelling with Housing Data
- Robust Regression
- Evaluate Model Performance
- Multiple Regression with statsmodel
- Multiple Regression and Feature Importance
- Ordinary Least Square Regression and Gradient Descent
- Regularised Method for Regression
- Polynomial Regression
- Dealing with Non-linear relationships
- Feature Importance Revisited
- Data Pre-Processing 1
- Data Pre-Processing 2
- Variance Bias Trade Off - Validation Curve
- Variance Bias Trade Off - Learning Curve
- Cross Validation

- Logistic Regression 1
- Logistic Regression 2
- Exercise 1 - Introduction
- Exercise 2 – SGD Classifier
- Exercise 3 - Performance Measures
- Exercise 4 - Confusion Matrix, Precision, Recall and F1 Score
- Exercise 5 - Precision and Recall Trade off
- Exercise 6 - The ROC Curve

## SVM

- Support Vector Machine (SVM) Concepts
- Linear SVM Classification
- Polynomial Kernel
- Gaussian Radial Basis Function
- Support Vector Regression
- Advantages and Disadvantages of SVM

## Decision Tree

- Training a Decision Tree
- Visualising a Decision Trees
- Decision Tree Learning Algorithm
- Decision Tree Regression
- Overfitting and Grid Search
- Project -Loading and preprocessing data
- Project – Modelling

## Ensemble Learning Methods Introduction

- Bagging P- 1
- Bagging P- 2
- Random Forests
- Extra-Trees
- AdaBoost
- Gradient Boosting Machine
- XGBoost
- Project Analytics
- Ensemble of ensembles P-1
- Ensemble of ensembles P- 2

ATS Learning Solutions

 Microsoft

Authorized Education  
Partner

## **kNN Introduction**

kNN Concepts  
kNN and Iris Dataset Demo  
Distance Metric  
Project

## **Dimensionality Reduction Concept**

PCA Introduction  
Dimensionality Reduction Demo  
Project Wine 1: Dimensionality Reduction with PCA  
Project  
Project Wine 2: Choosing the Number of Components  
Kernel PCA  
Kernel PCA Demo  
LDA & Comparison between LDA and PCA

## **Clustering Concepts**

MLeXtend  
Ward's Agglomerative Hierarchical Clustering  
Truncating Dendrogram  
k-Means Clustering  
Elbow Method  
Silhouette Analysis  
Mean Shift

## **Contents**

What is Artificial Intelligence  
Intelligence Using Turing Test  
Making Machines Think Like Humans  
About General Problem Solver (GPS)  
Developing an Intelligent Agent  
Installing Python

## **Working with Python**

Loading Data  
Supervised Versus Unsupervised Learning  
Classification  
Preprocessing Data  
Label Encoding  
Logistic Regression and Naïve Bayes Classifier  
Confusion Matrix  
Support Vector Machines

## **Exercise -1 Classifying Income Data**

Learning about Regression  
How to build Building a Single and Multivariable Regressor

## **Exercise -2 Estimating Housing Prices What is Ensemble Learning?**

Learning Decision Trees  
What are Random and Extremely Random Forests?  
Dealing with Class Imbalance  
Finding Optimal Training Parameters  
Computing Relative Feature Importance  
Predicting Traffic

Clustering Data with K-Means  
Algorithm Estimating the Number of Clusters  
Building a Classifier  
Segmenting the Market  
Creating a Training Pipeline  
Extracting the Nearest Neighbours  
Building a K-Nearest Neighbours Classifier  
Computing similarity scores  
Finding Similar Users  
Building a Movie Recommendation System

Sequence Learning  
Heuristic Search  
Deep neural Networks  
Projects

## **One module on Cyber and mobile security**

Bundled Free online Preparation on company specific test like TCS, Infy, Tech Mahindra, Cognizant, Capgemini, Amazon etc.

## **Program Details**

Training Duration :- 70hrs  
Project :- Included in the program  
Fees Rs :-7900 + GST
