

**Congratulations!**  
**YOU PURCHASED DRY TRANSFERS**  
**FROM Get**STENCILS.COM****

Please store transfers in a cool, dry, dark place. The transfers have a “dry” adhesive applied to the back of the image. While the transfer sheet should last several years if properly stored, there is a chance the adhesive may dry out over time. It is best to use within a year of purchase

The transfers have a top carrier sheet and a protective backing sheet. The ink image is put on the back of the carrier sheet in reverse so that when it is applied, it is a positive image.

**APPLICATION INSTRUCTIONS**

**1. TRIM THE TRANSFER**

Cut both sheets the transfers to shape with a comfortable margin around the perimeter of the graphic.

**2. LOCATE THE TRANSFER POSITION**

Remove the protective backing and position the transfer. You may want to use a piece of tape to attach one edge of the carrier sheet to form a tape hinge while you transfer the image.

**3. APPLY THE TRANSFER**

With the transfer in place, burnish or rub down the image through the carrier sheet using a hard object with a flat surface (i.e. a plastic flat head screwdriver). Be careful not to damage the surface by applying too much pressure. As the image leaves the carrier sheet, it will change color as the image is no longer attached to the carrier sheet.

**4. LIFT AND CHECK THE TRANSFER IMAGE**

Carefully peel back the carrier sheet and make sure the image transferred completely. If not, lay the carrier sheet back down and burnish again until the image has transferred completely being

careful to keep the same alignment. This is where the “tape hinge” is helpful.

**5. A TIP IF THE IMAGES STICK TO THE PROTECTIVE BACKING SHEET WHEN IT ARRIVES IN THE MAIL**

Depending on the weather and mail processing, your dry transfers may be sticking to their protective backing sheet. Cool the images by placing both sheets in the refrigerator for ½ hour.

**6. SEAL THE TRANSFER**

To seal and protect the transfer, use a very, light mist coat of clear finish. Please check for compatibility between the transfers and the clear finish you intend to use before using on your model.

**PLEASE NOTE:**

**DRY TRANSFERS ARE NOT WATER SLIDE DECALS AND DO NOT LEAVE A “RING” AROUND THE IMAGE. NOTHING GOES ON THE SURFACE BUT PERMANENT INK.**
