

# Superior Root Growth with C20™

## Case Study #2:

*“Feed the soil microbes that feed your plants”*

**Root** development in soils treated with C20™ is more prolific and healthier than for plants grown in non treated and fertilized soils.

Enhanced root growth in C20™ treated soils has been documented with trees, flowering plants, vegetables and turf.

These studies were conducted in 3.5-inch-deep pots and the photos were taken after 6 weeks of growth. Note the differences in soil compaction and root growth between the treatments.

***C20™ is ideal for treating trees, shrubs, and flowering plants in yards, gardens and landscapes.***
