

QUICK & EASY FENCE SYSTEM

System Includes:

4 - 46" x 38" coated steel panels

8 - "S" - secure clips

This set can be used alone or in combination to fence in garden area, create bin composter or for other containment solutions. A single kit will enclose a 46" x 46" garden or hold 42 cubic feet of compost.

Assembly:

1. Choose area that system will surround and lay out panels.
2. The panels have a 6" post that will be pushed into the ground to secure the system. Your system will stand 32" tall when installed.
3. Starting with the first panel, place it upright on the ground and gently push the posts partially into the ground. Proceed with other panels taking care to place them as close as possible to the adjacent panel side. Once it is all upright and in place, the posts will be pushed systematically and sequentially into the ground to ensure a close fit between panels. **Do not secure with the "S" clips until the entire unit is in the ground.**
4. Once all panels are in place, work in a circular direction gently pushing each panel completely into the ground.
5. Secure the adjacent panels using the "S" secure clips (included). Note, if the panels are too far apart they will not be able to be secured with the clips. Do not pull the panels together and secure as the clips could snap. Reposition the panel making sure it is as close as possible to the adjacent panel.
6. Use two(2) "S" clips per side to secure.
