

Trees in Sidewalk Grates Improve Color and Growth with C20™

Case Study #12:

“Feed the soil microbes that feed your plants”

Photos courtesy, GreenLife Supply, Minneapolis, Minnesota

Sidewalk planting pits built using CU-Structural Soil™ were planted with ginkgo trees in 2010 and covered with metal sidewalk grates. Growth and color of the trees did not improve over the six following seasons.

In May of 2016, C20™ was applied at labeled rates on the top of the street grates and then swept in through the cracks. Improvement in tree color was noticed after two weeks with significant improvement in both growth and color continuing through August of 2016 when these photos were taken.

C20™ is ideal for treating trees, shrubs, and flowering plants in yards, gardens and landscapes.
