What Forced Mankind's Evolution to Upright Posture?

In the academic world, our evolution to upright posture and bipedalism has a number of explanations. These include that it freed up the hands for all kinds of usage. Another is that we could scout dinner by looking over the tall grasses of the savannah. Yet another considers that loftiness helped keep the massive brain cooler.

This image essay introduces a less academic but more practical explanation. One that men can readily understand, and is offered in the spirit of honest inquiry.

Then the whole structure changed as follows:

But most academic theories fade into almost insignificant curiosities when compared to the realities of day-to-day life:

– Anon.

– Doris Day: Dance scene in *Pillow Talk*

– No need to identify.
