

# Process to Identify Hazards and Controls

## Hazard Evaluation Example

		<b>SEVERITY</b>			
		<b>HIGH (I)</b>	<b>MEDIUM (II)</b>	<b>LOW (III)</b>	<b>VERY LOW (IV)</b>
<b>PROBABILITY</b>		Imminent and immediate danger of death or severe illness. Likely to impact humans and animals.	Danger and illness may be severe, but it is not imminent or immediate. Likely to impact animals, possible to impact humans.	Illness or injury may occur, but impact is reversible. Likely to impact animals, unlikely to impact humans.	Illness or injury is minor. Possible to impact animals, unlikely to impact humans.
<b>HIGH (A)</b>	Immediate danger that the hazard will occur.	I-A	II-A	III-A	IV-A
<b>MEDIUM (B)</b>	Probably will occur in time if not corrected.	I-B	II-B	III-B	IV-B
<b>LOW (C)</b>	Possible to occur in time if not corrected.	I-C	II-C	III-C	IV-C
<b>VERY LOW (D)</b>	Unlikely to occur; may assume hazard will not occur.	I-D	II-D	III-D	IV-D
