

## GRAB BARS

### *Colonial Grab Bars*

A set of these optional grab bars enhances the styling while adding functionality to any Hydro Systems bathtub. Designed to be mounted on most flat or curved surfaces, these grab bars are designed for quick removal and remounting without access to the backside of the tub.

### *Universal Grab Bars*

Hydro Systems, Inc. has designed and developed a new, universal mount grab bar. Due to mounting design and angles, this bar affords a mounting solution in virtually any position on any tub. The classic Grab Bar often is limited in its mounting positions. An additional plus is that this Grab Bar has a button mount, allowing this Bar to be utilized in situations where the tubs are nested for shipping. Two small set screws are all that are needed to install these Bars. There are two different length Bars available – 5¾" and 7¾" – with the longer working nicely on the larger tubs.
