Drone Flight Cage

A flight cage for release and easy access of drones during semen collection during instrumental insemination of queen bees

DESCRIPTION

Mesh Cage with a Vinyl Floor and Sleeve Opening, Collapsible, Easy to Assemble, and Washable. Made with a lightweight fiberglass framework, constructed outside the enclosure. Size 24.5 cm (9.6 in) square.

Assembly Thread one pole into each of the 12 edge sleeves of the Cage. Connect the poles and splints with the black angle brackets.

Care Avoid Temperature Extremes. Store between temperatures of -10°C (14°F) to 60°C (140°F). Avoid longterm exposure to sunlight. Nylon fabric degrades in UV ray. When disassembling, if the poles are tight do not force apart to avoid ripping the seam. Find a looser connection to start.

Cleaning Hand wash with warm water and soap. Soak as needed to remove dried feces.
