

APEX CodeWise™

LE PRX LCode Templates (Common Procedures)

WHY CODEWISE?

- To maximize the efficiency of selecting LCodes...
 - > by separating Orthotic Common Procedures from Prosthetic Common Procedures, and...
 - > by sorting the Prosthetic Common Procedures
 - > by Base Code, Suspension, Knee, Foot, and Specialty Components,
- To minimize the chance of missing LCodes, and
- To provide better customer service for your patients by selecting the LCode Common Procedures IN the patient room.

APEX 100™ PROFESSIONAL MANAGEMENT SYSTEM – KEY ELEMENT #53 (LEVEL 1).

During a prosthetic evaluation, prosthetists have access to LCode Templates that cover the majority of the types of suspension, knees, and feet that we use so LCodes are not missed; and we have Code Intelligence Rules set up so we avoid any billing issues related to quantity or K-level restrictions.

How is CodeWise implemented in my practice?

The following steps outline the 8-12 hour process...

- STEP ONE** A Confidentiality Agreement, Business Associate Agreement, and Purchasing Agreement (with a Statement of Work) are executed.
- STEP TWO** Apex 360 Systems hosts a GoToMeeting with client to go through the CodeWise Questionnaire. For example, do you fit preparatory prostheses? How many multiply socks do you typically dispense? Do you ever use cuff suspension (with a pelite liner and distal cushion) for patients with a transtibial amputation? Which 5 'vertical shock' feet would you like listed?
- STEP THREE** LCode Templates are created and loaded into the practice management software remotely by Apex 360 Systems.
- STEP FOUR** Apex 360 Systems provides training to client's prosthetists via GoToMeeting.
