## Cockroach Treatment Preparation Sheet (Residential)

**The following must be done prior to the service technician's arrival. Failure to properly prepare for treatment will result in a mandatory re-schedule to an alternative service date.**

**A roach entering your home is not always your fault and can happen in ways that you have little or no control over. Roaches can be introduced into your environment from grocery bags, used appliances, shipping materials, and neighbors. Or, they can simply come in from the exterior of the home. Roaches require three basic things to survive: food, water, and shelter. Once the presence of roaches has been identified, swift action is required to prevent the spread of this pest.**

### Items That Must Be Completed Prior To Our Arrival:

- Clean kitchen thoroughly, including floor, stove, range hood, and counter tops. Clean inside and outside of dishwasher. Pull out refrigerator, stove, etc. and clean behind and underneath. All cleaning should be done before, not after treatment. Turn off Smoke Alarms.
- Everything should be removed from kitchen cupboards, above and below the sink, drawers and countertops should be cleaned. Wash cupboards inside and out, wipe out drawers with damp rag, clean sink and countertops well. Items may be placed on the kitchen table or on a couch or chair, and should be covered with newspaper or a sheet.
- Bathroom cabinets and under sink should be cleaned. Wash cabinets inside and out, wipe out drawers with damp rag, clean sink, tub, inside and outside of toilet and scrub bathroom floor.
- Pick up and remove trash inside and outside
- Vacuum all carpets.
- Clothes hanging in closet should be removed and placed on beds. Shoes and other items on closet floors should be removed. Clean closet shelves. Furniture and other items should be moved out at least 2 feet from walls.
- Pets should be removed from inside. Fish tanks should be covered or removed. If fish tanks are covered, the air pump should be shut off.
- Children's toys and pet food dishes and exposed food should be placed in a protected area.
- If you are ill or pregnant or if you or any member of your household has sensitivity to chemical odors or other odors, consult with your physician prior to the treatment.

### After Our Treatment Is Complete:

- Do not re-enter the premise for at least 4 hours unless specified otherwise. If you have medical problems or are sensitive to odors, it may be advisable to stay out longer. Consult your physician.
- Immediately upon re-entering the treated premises, open windows and doors to air thoroughly.
- Thoroughly wash (with soap and water) all exposed eating surfaces (including table and counter tops) and any exposed dishes or silverware. Do not wash any treated surfaces such as baseboards.
- In roach control, sanitation is essential. Do not leave empty milk or beverage bottles inside. Keep areas under and behind stoves and refrigerators clean. Do not allow food and garbage to accumulate in areas where roaches feed or hide. Pet food should be stored in sealed containers.
- It is normal to see roaches for several days after the treatment. It may take several days for roaches hiding in inaccessible areas to contact treated surfaces. After 2-3 weeks, your house or apartment should be re-treated. There is a 30-day warranty from the time of the re-treatment (only if the re-treatment is performed 2-3 weeks after the initial.)
