

MODEL "A" SPEEDSTER KIT

A handsomely designed speedster kit for the Model A chassis! Now you can build a dependable speedster with dashing design, plus the safety features of four-wheel brakes and a self-starter. It will provide hours of enjoyment as well as being an excellent investment.

All you need to build a speedster is your own Model A chassis and running gear, plus the finishing touches. The A speedster kit provides the rest.

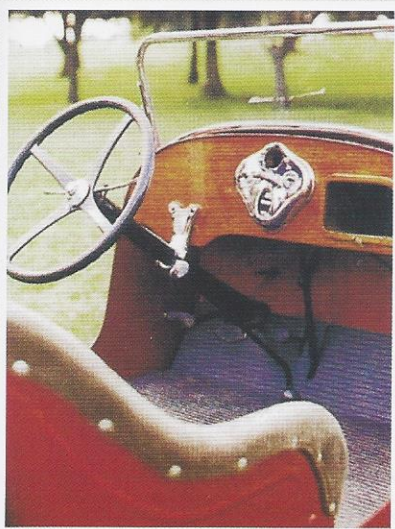

ROOTLIEB, INC

Parts are designed for easy assembly. Construction tips come with the kit. The speedster is designed for a 1928-29 chassis and running gear. However, it can be adapted to a 1930-31 chassis simply by altering the base of a 1928-29 radiator to fit a 1930-31 frame.

The extra long hood with corresponding steel cowl gives a long sleek look. The specially designed crown top fenders and diamond pattern steel running boards provide both durability and spirited racy appearance. All parts are top-quality metal. The spare tire mount is not included. (It is a 1926-27 rear spare tire mount cut and angled as you desire.)

Smart finishing touches will be determined by our own individual preference. Call or write Rootlieb, Inc. today for the parts you need, or for further information.
