

## Weekly Service Visits

### Our services

Our goal at **Mow-N-Man Services** is to provide you with consistent, reliable and dependable service while enhancing the beauty of your property through attentive, proactive and professional care. We use an integrated pest management (IPM) and plant health care (PHC) philosophy that balances the horticultural needs of your landscape with your priorities and budget. As our customer, you choose how you want your landscape to be maintained, and we will work within those parameters.

**Our basic landscape maintenance service includes:**

- 1) Seasonal Clean-ups:** Spring clean up, fall leaf clean up and general clean up during the summer months as needed. This includes removing leaves and other debris from the lawn and landscape beds as the season requires.
- 2) Weekly Service** visits for the entire growing season (April through November), which include **mowing, edging, line trimming** and blowing debris from hard surfaces.

We can also apply Round-up for grass and weeds growing in walks, patios and driveways.

**3) Turf Care Program** (five fertilizer applications) with weed control and crabgrass prevention. Each application of slow-release fertilizer is formulated and timed to provide maximum benefit to your lawn. We monitor your lawn to watch for problematic disease or insect infestations. Based upon your turf needs we will apply herbicides, fungicides and insecticides as needed to control pest populations that pose problems for your landscape.

**4) Turf Management**, including soil testing, aerating to create a healthy lawn, soil amendments and light landscaping.

**Additional services that can be added individually are:**

- **Bed maintenance**, including weeding, pruning, edging beds, fertilizing and mulching
- **Enhancements**, including plantings of annuals, perennials, shrubs and trees
- **Seasonal Annual Color** plantings
- **Lawn Renovation** including spot-seeding and slit-seeding
- **Lawn Installations**
