

# Synthetic Customized Wigs

## Synthetic Customized Wigs

A Bolder Blonde only works with Powder Room D Wigs. You can check out their website at [PowderRoomD.com](http://PowderRoomD.com)

Powder Room D offers 180 Degree Low-Heat-Safe Synthetic Wigs in a wide variety of trendy and classic styles. Caps are One Size Fits Most. You can also email them your cap measurements for a custom cap.

Most wigs come with 24" of length and around 150-180% density of soft synthetic hair fiber.

Wigs come with a lace front and wefted hair on the top and back. All wigs have securing combs on the inside of the cap and adjustable straps at the nape of the neck.

A Bolder Blonde Customizes Powder Room D wigs by giving them the texture of natural hair through heat styling with hair products and tailored texturizing with razors and shears

Your Low-Heat-Safe Synthetic wig will move like natural hair and feel like natural hair.

Wigs have become a safe way to try out new color and trendy styles without the commitment and cost of permanent change :)

## Customizing

### **Services and Process:**

- 1) Product and Heat Styling
- 2) Hairline Texturizing and Overall Texturizing with Razor
- 3) Perimeter Haircut, Face Framing, Layers, Layers (Bangs Optional)
- 4) Product and Heat Styling x2

- 5) Hairline Texturizing and Overall Texturizing with Shears
- 6) Wig comes with Styrofoam Head and two T Pins to stabilize
- 7) Wig is cut and styled according to client's desire

The "Lived In" Synthetic Wig process takes 6-8 hours depending on wig style and desired results.

### **Styling And Maintenance**

- 1) Your Low-Heat-Safe Custom Synthetic Wig comes styled and you'll find it easy to restyle.
- 2) If you use heat styling tools, be sure that they are digital so that you know the temp is exactly at 180 degrees. Synthetic fiber sets a curl when it cools and hardens.
- 3) Curl can set well when a blowdryer is used on a heat setting followed by a cold setting, or using heat and a pin curl to air-cool and set the curl.
- 4) Flatirons work well and only need a once over. If you let the flatiron stay on a section too long or go over a section more than a couple times, you risk melting your wig.
- 5) When you're done wearing your wig, gently brush it out and unhook the wig combs from under your barrettes.
- 6) If you used gel on the lace front, use a warm washcloth to loosen the gel before taking your wig off.
- 7) When you need to wash your wig, brush your wig gently before placing your wig in a bowl of cool water with a capful of shampoo. Do not wash vigorously, let your wig soak, and gently loosen any debris on the inside of your cap with your hand. Rinse with cool water. Apply a capful of conditioner on the ends only, then rinse thoroughly.
- 8) Place wig on a towel and gently pat, allow to air dry by placing wig on a wig rack or a tall can so it can dry thoroughly. Do not place wig on styrofoam head, it will stretch out your cap. Restyle your wig with dry shampoo and spray wax for natural hair texture.

### **Custom Wig Payments**

Custom Wig Payments Are Non-Refundable. The payments are split into three over a period of milestones and are pre-set for email invoicing. Your first payment is a deposit of \$300.

- 1) First payment is made at time of scheduling your appointments for your Custom Wig.
- 2) Second Payment is made one week prior to scheduled customizing appointment. (If payment is two days past due, the customizing appointment will be cancelled).
- 3) Final payment is made the week before your scheduled cut and styled appointment.
- 4) Signature \_\_\_\_\_ Date \_\_\_\_\_
