

What do we mean by weed control for beds & other non-turf areas?

This means controlling weeds and grass in landscape beds consisting of mulch or stone, gravel areas or any other area they are not wanted.

What are we able to do for these areas?

We will assess the areas and determine the best way to handle them. This could involve using a high quality pre-emergent to prevent new weeds from germinating and/or treating the existing weeds or undesirable grass on a regular basis until the areas are under control.
