\* Light Dimming fabrics provide category C, opaque light control because even when the vanes are completely closed they DO NOT completely seal off all incoming light. See vane closure diagram on page 16 for a visual reference. Note: Collections are presented alphabetically. Within each collection colors are also arranged alphabetically

A. Glare Reducing Softly filters light and reduces glare. Images, shapes and people can be seen clearly. Provides the least amount of light and shape screening.

**B. Filtering** Filters strong light. Images, shapes and people can be seen with some clarity. Provides a modest degree of light and shape screening.

**C. Shading** Significantly reduces light. Images, shapes and people cannot be seen clearly. Provides a moderate to strong degree of light and shape screening.

D. Blocking

Dramatically reduces light. Images, shapes and people are not distinguishable. Provides privacy against most all direct light and shape screening (except minimal light that may seep through closed or overlapping opaque/blackout vanes).

E. Blackout Blocks out virtually all light (except light that may enter on the sides of the shade) for maximum privacy and darkness.

\* Light Dimming fabrics provide category C, opaque light control because even when the vanes are completely closed they DO NOT completely seal off all incoming light. See vane closure diagram on page 16 for a visual reference. Note: Collections are presented alphabetically. Within each collection colors are also arranged alphabetically

A. Glare Reducing Softly filters light and reduces glare. Images, shapes and people can be seen clearly. Provides the least amount of light and shape screening.

**B. Filtering** Filters strong light. Images, shapes and people can be seen with some clarity. Provides a modest degree of light and shape screening.

**C. Shading** Significantly reduces light. Images, shapes and people cannot be seen clearly. Provides a moderate to strong degree of light and shape screening.

D. Blocking Dramatically reduces light. Images, shapes and people are not distinguishable. Provides privacy against most all direct light and shape screening (except minimal light that may seep through closed or overlapping opaque/blackout vanes).

E. Blackout Blocks out virtually all light (except light that may enter on the sides of the shade) for maximum privacy and darkness.

#### CORDLESS LIFT

Raise, lower, and tilt shadings with cordless lift. A great choice for homes with children and pets, the lift, lower, and tilt mechanism are all controlled by the clear plastic handle attached to the bottomrail.

With your thumb on the front of the handle and fingers on the back, gently pull down to lower the shading. The hinged handle elegantly retracts when released. Continue pulling on the handle to lower the shadings and open the vanes.

To close the vanes and raise the shades, gently pull down on the handle (about 1") and release. The vanes will close and then the shading will retract into the headrail.

### TILT ONLY SHADING

Ideal for sidelights or narrow windows.

- Shading cannot be raised, it can only be tilted open or closed.
- Hold down brackets are used to secure the bottomrail.

### FABRIC-COVERED HEADRAIL

Features a coordinating fabric wrapped onto the headrail to provide a soft fabric look from top to bottom. (See surcharge on pricing pages)

COVER BRACKET NSTALLATION BRACKET

### BACK COVER BRACKET

When a back cover is used, attach back cover brackets to the installation brackets before mounting them. Remove the tab from the top of the back cover brackets and both tabs at the rear of the installation brackets.

After mounting the installation brackets, install the back cover.

### ADJACENT SHADINGS

To span wide window openings, window shadings may be installed adjacently, so their headrails abut. The gap between the fabric panels of the adjacent shadings varies according to the control placement, as shown in the table below.

CONTROL PLACEMENT		
Adjacent (Abutting)	Window Shadings	
Left/Right Shadings	Center Gap	
Right/Right Controls	3/4"	
Left/Left Controls	3/4"	
Right/Left Controls	1-1/16"	
Left/Right Controls	1/2"	
Window shadings are not recommended for bay windows or butt-and-pass applications.		

### OPTIONAL DUST COVER (OUTSIDE MOUNT)

Shields the fabric and internal headrail components from dirt, dust, and other contaminants.

#### SIDE-BY-SIDE VANE ALIGNMENT

When window shadings are installed side by side, vane alignment can be guaranteed within 1/4" only if:

- Shadings are ordered at the same time and in the identical style, color and height.
- Shadings that need to be aligned are specified on the order form (a note must be included in Special Instructions).
- Shadings exceeding combined width of 120" cannot be guaranteed

Note: Vane alignment cannot be guaranteed for Two-On-One Headrail and motorized shadings <u>combined</u> on the same order.

# ADDITIONAL NOTES

### SHADING ADJUSTMENT

Shadings should wind evenly and not skew to one side.

A balance weight on the bottomrail can easily be adjusted if the fabric winds unevenly on the roll when the window shading is raised. Uneven winding can cause damage to the edge of the fabric.

- If skewing does occur:
  - Ensure headrail was installed level; shim if necessary.
  - To release, insert a flat blade screwdriver into the weight lock and turn clockwise.
  - Adjust placement of weight in bottomrail, 1" at a time, toward side where fabric is gathering.
  - Secure the weight locks in position by turning them counter clockwise, after making the adjustment.
  - Raise shade, then lower, if necessary, adjust again.

# BOTTOM RAIL BALANCE WEIGHT WEIGHT LOCK

Magnetic hold-down brackets secure the bottom of the shading to prevent swaying. Available upon request. Standard on tilt-only shadings.

# SIMPLICITY RECHARGEABLE MOTORIZATION: OVERVIEW

### Simplicity Rechargeable

- The Rechargeable Simplicity motor program features an integrated rechargeable lithium ion battery in the motor casing and is fully concealed by the inner tube.
- Rechargeable battery is included with the motor. The average battery charge will last 6-12 months based on an average sized shade raised and

lowered once per day. The life of the battery charge will vary based on the type of window covering selected, the size and weight of the window covering and the number of times the shade is operated on a daily basis. The battery can be recharged up to 500 times. It takes approximately 5 hours to recharge the motor when fully depleted. (Charging port available on the right side only)

### **Battery Charger**

• An 8.4 Volt charger requires a standard power outlet to recharge the battery. The charger must be specified when ordering Simplicity Rechargeable Motorized shade option. The charger plugs into the charging port of the motor. The charger is black and comes with a 156" wire. The dimensions are 1" wide x 2-1/2" length x 1-3/4" deep. Sold separately.

### **Solar Panel Recharge Option**

- Plugs in to any Simplicity Rechargeable motorized shading (does not work with PowerWand). Provides
- constant trickle charge to 7.4v Li-ION Rechargeable battery packs. Does not require direct sunlight, but performs best in regular direct sunlight applications. Will prolong the life of the charge of the 7.4v rechargeable battery packs, and in some applications will maintain charge indefinitely.
- Life of charge is subject to application variables such as size and weight of shade, frequency of use, amount of direct sunlight exposure, etc.

### 5 Channel Remote

 The remote can operate up to five shadings simultaneously, individually or in groups. Remotes and holders are available in white or black. The remote comes with a holder which can be mounted to a wall for easy storage. The range of the remote is approximately 80 feet.

### Please Note:

- Not all motors run at the same rate of speed.
- Simplicity motors have a "Favorites" position setting. To set a "Favorites" position, follow instructions provided in the installation instructions.

# **POWERWAND MOTORIZATION: OVERVIEW**

### PowerWand<sup>™</sup> Motorization

 Shadings can be fabricated with the PowerWand Rechargeable Push Button Control option. The PowerWand Rechargeable option is an easy, cord free motorized operation for the budget savvy homeowner. PowerWand Rechargeable uses Simplicity motors and components.

### **PowerWand Rechargeable Shades Operation**

- Press the up or down button on the pendant to raise or lower the shading to your desired position. No programming is required with PowerWand as upper and lower limits are set at the factory. If desired, upper and lower limits can be adjusted in the field.
- Please refer to the installation instructions for instructions on resetting the upper and lower limits and setting a favorites position can be programmed on-site.

### **PowerWand Appearance**

- The PowerWand Rechargeable wand and pendant is attached to the head rail and requires no additional mounting.
- The wand and pendant hangs down the front of the shades from the head rail.
- Pendant is 2-1/2" long.
- The pendant does not need to be mounted to the wall to operate the shade.

### **PowerWand Options**

- · Wand is available in Black or White (there is no default).
- · Wand is available in 1 foot increments from 1 to 5 feet (there is no default).
- Wand is available on the right side of the shade ONLY.

### **PowerWand Battery Life**

· The battery life will vary based on the type of window covering selected, the size and weight of the window covering and the number of times you operate the blind on a daily basis.

### **Battery Charger**

 8.4 Volt charger requires a standard power outlet to recharge the battery. The charger must be specified when ordering the PowerWand motorization option. The charger plugs into the charger port on the side of the pendant. The charger is black and comes with a 156" wire. The dimensions are 1" wide x 2-1/2" length x 1-3/4" deep.

#### **REMOTELIFT 2.0 SYSTEM OPTIONS**

#### **BATTERY WAND**

Battery wands are the standard power source whether inside (IB), outside (OB) or end (EB) mount, if applicable. Battery wands are mounted on the rear of the headrail. The redesigned battery wand will allow for batteries to be changed without removing the window covering from the window.

- 12 AA 1.5V alkaline batteries.
- Battery life exceeds one year, depending on usage.
- Replace batteries when the window covering(s) begin to operate slowly.

#### SATELLITE BATTERY PACK

The satellite battery pack is an optional power source. The battery pack connects to the same side of the headrail where the receiver eye or satellite eye is located. The satellite battery pack is the best choice when the window covering is mounted in a high window, restricting access to a battery wand.

- 18V satellite battery pack:
  - Available in 15", 4', 10' and 20' wire lengths.
  - 12 AA 1.5V alkaline batteries.
- Battery life is approximately one year, depending on usage.
- Replace batteries when the window covering(s) begin to operate slowly.
- Mounting options: top of headrail, next to molding or under the sill.
- Satellite battery pack cover can be painted.

#### **DC POWER SUPPLY**

The DC power supply is an optional power source. The DC power supply plugs into any standard household outlet.

- 18V DC power supply:
  Available in 15", 4', 10' and 20' wire lengths.
- · Eliminates need to change batteries.

### STANDARD SHADING **OPERATION**

Shadings are operated using a continuous cord loop. As shown in the illustration below, from the fully raised position [1] pulling down on the rear half of the cord loop lowers the shading [2, 3]. After it is fully lowered, continuing to pull down on the cord pivots the bottomrail and opens the fabric vanes [4]. When the vanes are fully open [5], limit stops in the headrail prevent further movement in that direction.

With the fabric vanes fully open, pulling down on the front half of the cord loop first closes the vanes [6, 7] and then raises the window shading [8]. When

it is fully raised [1], limit stops again halt shading movement, preventing the bottomrail from being retracted too

far into the headrail.

### Light Control

With the shading in the fully lowered position, the continuous cord loop is used to adjust the fabric vanes from open to closed, and anywhere in between. Light control is at your customer's fingertips. (Note: The degree of maximum vane closure varies slightly from the top to the bottom of the shading.)

VANE OPENING

### Vane Opening

Vane opening is the amount of unobstructed visibility between fully open vanes when looking through the shading at eye level. Vane opening for shadings is 1" to 1-1/2" depending on vane size and opacity.

#### Vane Closure

When the vanes of a window shading are closed, they overlap each other, blocking the view. However, the vanes do not contact each other along the full length of the shading - they do not form a perfect seal against light leakage. This is most visible toward the bottom of the shading.

Vane closure is measured as the distance between the front and rear fabric facings 6" up from the lowest point of the bottomrail, with the shading fully lowered and the vanes closed, as illustrated here. Vane closure is 5/8" for shadings under 96" in height and 7/8" for shadings over 96" in height.

PLEASE NOTE: Cord tensioner MUST be mounted to window casement or wall in order for the shade to operate.

#### To Lower the Shading

To lower shading and open vanes, pull cord toward the center and down in long even strokes. Note: Allow cord to fully retract between each stroke.

#### To Close and Raise the Shading

To close vanes and raise shading, pull cord straight down or down and slightly out using long even strokes.

#### **CORDLESS LIFT**

Raise, lower, and tilt shadings with cordless lift. A great choice for homes with children and pets, the lift, lower, and tilt mechanism are all controlled by the clear plastic handle attached to the bottomrail.

With your thumb on the front of the handle and fingers on the back, gently pull down to lower the shading. The hinged handle elegantly retracts when released. Continue pulling on the handle to lower the shadings and open the vanes.

To close the vanes and raise the shades, gently pull down on the handle (about 1") and release. The vanes will close and then the shading will retract into the headrail.
