

# Winscribe Text

Less Paper. Faster Reporting. Better Patient Care.

Administrative and clinical documentation in healthcare organizations is a considerable task and can be burdensome to clinics and hospitals that are looking to improve patient care. Healthcare organizations generate critical documents and reports for each patient including diagnosis, treatment, blood test reports, X-ray reports, and more – all of which need to be managed for the patient's care and for medicolegal or compliancy reasons. With Winscribe Text, the processing and management of medical documentation is a breeze.

## What is Winscribe Text?

Winscribe Text is an integrated end-to-end medical report and documentation management solution for healthcare organizations that handles all steps in the documentation process – from creation to distribution, and every step in between. This next-generation system is a central platform for managing speech-driven reporting, billing, and documentation; staff productivity; document turnaround processes; and report distribution – all while helping healthcare organizations manage quality assurance and meet compliance.

### Winscribe Text Highlights:

- Complete report management from document creation and review to distribution
- Reduced document creation processing times
- User-friendly interface, which facilitates better physician adoption and increased productivity
- Electronic signature
- Central platform to create, use and manage report and other document (Word) templates
- Customize data fields and alerts
- Integrate with Health Information Systems (HIS) and other third-party applications via HL7, XML or Web Services
- Automated distribution and sending options
- Integrated speech recognition, digital dictation or keyboard document creation
- HIPAA compliant, using secure access and tracking protocols

### Key Benefits:

**Fast & Accurate Reporting** - Using intelligent speech recognition or digital dictation to capture more detailed and accurate information, and share real-time information electronically to enable faster and more accurate reporting.

**Increase Efficiency & Reduce Costs** - Smart workflow automation enables increased levels of clinician productivity and operational efficiency.

**Integrated Solution** - Winscribe Text can integrate with your organization's EMR, PACS, or other HIS to improve reporting capabilities, reduce duplicate data entry and to improve your reporting workflow.

**Paperless, with an Automatic Audit Trail** - Electronic capture, distribution, authentication, and tracking streamlines report creation and distribution processes, while helping to ensure compliancy.

**Easily Use & Manage Report Templates** - Winscribe Text offers dynamic templates, which can be automatically populated with 500+ different dynamic data types, improving documentation efficiency.

**Automatically Distribute Documents** - Medical documents can be automatically distributed to multiple locations via fax, automatic print, secure email, or integration into a HIS.

**Document Meaningful & Custom Information** - Define your own database fields, store this data and incorporate it into your hospital's reports.

**Better Service & Patient Care** - Distribute real-time electronic information and reports, enabling improved service levels, creating a more patient-centered experience and increasing patient safety.

## Complete Document Workflow Management

Winscribe Text supports clinicians throughout the entire medical documentation process, while providing instant access to information needed to capture complete patient encounters. The system manages all aspects of medical documentation and reporting, organized in three functional areas: Document Creation, Document Management and Document Distribution.

### Document Creation

Winscribe Text provides a user-friendly interface for speech-driven documentation that can be integrated with electronic patient records and other Health Information Systems (HIS), enabling fast and accurate reporting. You can use Winscribe Text to dictate reports, letters or patient records with a speech microphone, digital recorder or mobile device (including smartphones and tablets). Further enhance the documentation process and reduce the need for transcription with speech recognition, which types as you speak.

Alternatively, Winscribe Text can be launched directly from an EMR or another Health Information System (HIS). Integrations with HISs enable select patient data to be displayed, customized for reports or alerts, and placed within a prepopulated template. With the use of voice snippets and supplementary data that is included from the integration, Winscribe Text helps to reduce the need to insert the same information multiple times. Winscribe Text can equally be integrated via Web Service.

### Document Management

Winscribe Text reliably, efficiently and securely manages the entire documentation process. Created documents and reports are processed, corrected and electronically signed within the software. You can easily track the status of individual documents and retain a constant overview of your to-do list. Winscribe Text also helps to address compliance by tracking user and event activity, including audit trails of activity or events searchable by patient visit, document, user, location and/or date or time.

By integrating Winscribe Text with your HIS, the solution provides a step-by-step process of the document flow to the HIS, so that the hospital can update data on the fly. Furthermore, while the document is still under review, Winscribe Text provides the ability to make the audio data available to other third-party systems to reduce turnaround time and access for preliminary analysis.

### Document Distribution

Documents can be completed and electronically signed by the author or sent to internal or external transcriptionists for correction before sign-off. Completed and signed documents are automatically delivered to the relevant recipients or directly incorporated into your healthcare information system. Documents can be distributed to multiple locations using different methods, such as automatic local or remote fax, automatic print, secure email, or directly to an EMR or other HIS via HL7 or XML integration. Winscribe Text equally supports external service providers via its Outsourcing Manager, where documents can either be printed or processed by a third-party provider, while controlling the entire process remotely.

During this process, medical assistants and other approved support staff members can add, remove and edit recipients; review doctor lists for distribution; and retain control of the distribution set-up. Depending on the rules established in the organization, certain types of reports can be signed electronically to further shorten turnaround times and support paperless practices.
