Initiatives

Louisiana's State Senator Sharon Weston Broome, State Representative Regina Barrow, and Metro Council member Ronnie Edwards are among the political leaders trying to find optimal and best uses options to utilize the available land under the former Earl K Long Hospital, in North Baton Rouge. These leaders are asking the public to identify potential investment programs that will revitalize the Neighborhood by integrating microbusiness and real estate development. The objective is creating positive conditions for improved neighborhood economic vitality, including access to goods and services, greater social connectivity, improved property value, and fostering local business entrepreneurship. In this report we summarize a study conducted by the Greenwell Spring-Airline Highway Economic Development District and responses from the Community Level Meeting organized by the three leaders. Both activities collected data on attitude and perception among residents in North Baton Rouge, on the optimal use of land after the facility is demolished by the end of 2015. In addition, this reports provides socio-economic profiles of residents living around the facility. The former Earl K. Long Medical Center was located along the Airline Highway in North Baton Rouge. Redevelopment may have immediate benefits to residents living in the following ZIP Code Tabulation Areas (ZCTAs): 70805, 70807, 70811, 70812, 70814, and 70819. The ZIP Code Tabulation Areas (ZCTAs) are generalized areal representations of United States Postal Service ZIP Code service areas. They identify individual post office or metropolitan area delivery station associated with mailing addresses and are a collection of mail delivery routes

The main objective of the reports is not to provide any suggestion but providing visuals that summarize community responses and regional socio-economic profiles. For the Greenwell Spring-Airline Highway Economic Development District study, the focus is on responses regarding the options on the best use of the land. The community level meeting asked participants three questions. What is missing in North Baton Rouge? What would you like to see built at the former Earl K. Long Medical Center? What would you do not like to see built at the former Earl K. Long Medical Center? The report summarizes the responses from these questions.

The socio-economic of residents and business profiles data for the six ZCTAs were generated from the five years (2009/2013) American Community Survey and the Current Business Patterns database maintained by the US Census Bureau. The American Community Survey is an ongoing survey that provides data every year; giving communities the current information they need to plan investments and services. County Business Patterns is an annual series that provides subnational economic data by industry. This series includes the number of establishments, employment during the week of March 12, first quarter payroll, and annual payroll. This data is useful for studying the economic activity of small areas and government agencies use the data for administration and planning purposes.

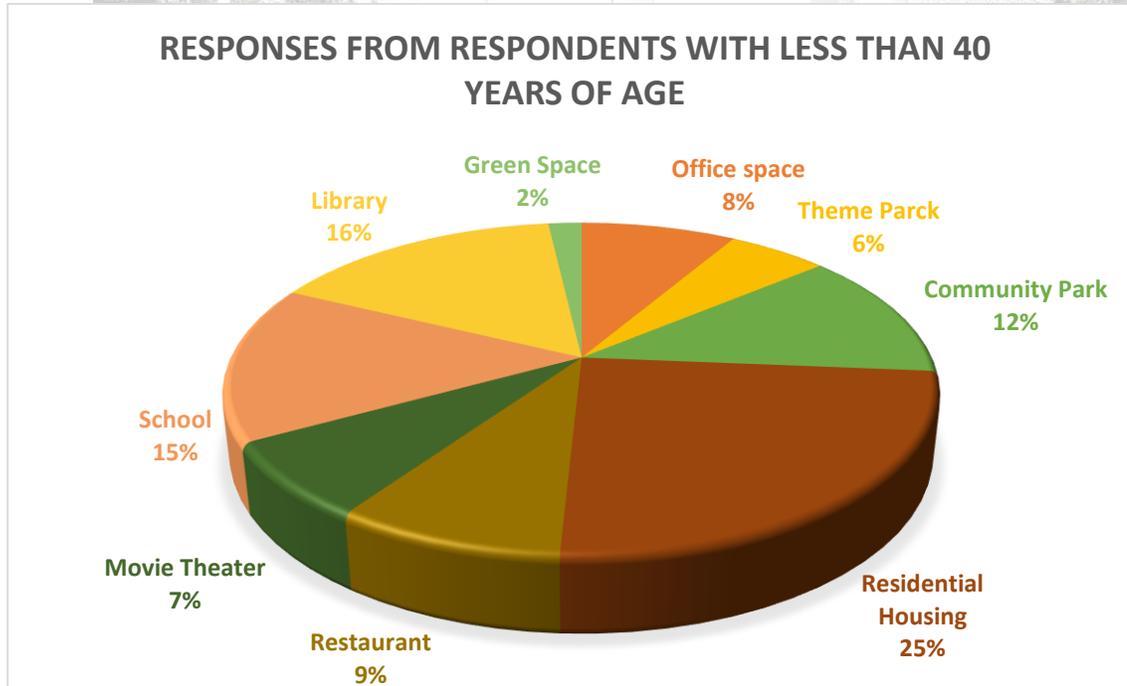

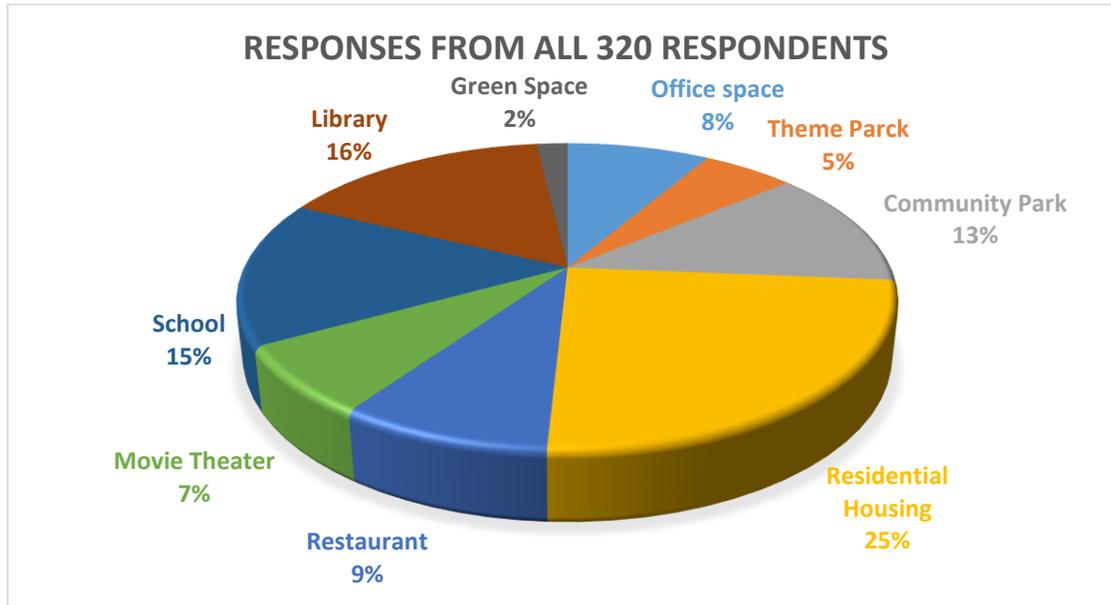

Potential Beneficiaries of the Initiatives

Local economic development that is focused on developing neighborhood and revitalizing businesses in the neighborhood is an innovative strategy and a road to prospering communities. However, communities have to be engaged and their must be enough resources to support the revitalization and development process. The redevelopment of the property should consider stabilizing and regerating neighborhood business districts that will contribute to resident wealth building, strengthen local economics and long-term sustainability of neighborhood business district.

Community Responses Regarding Redeveloping the Property

The Greenwell Spring Airline Highway Economic Development District contacted 320 residents and asked a questions regarding the best use of the property after the closure. The responses are summarized below.

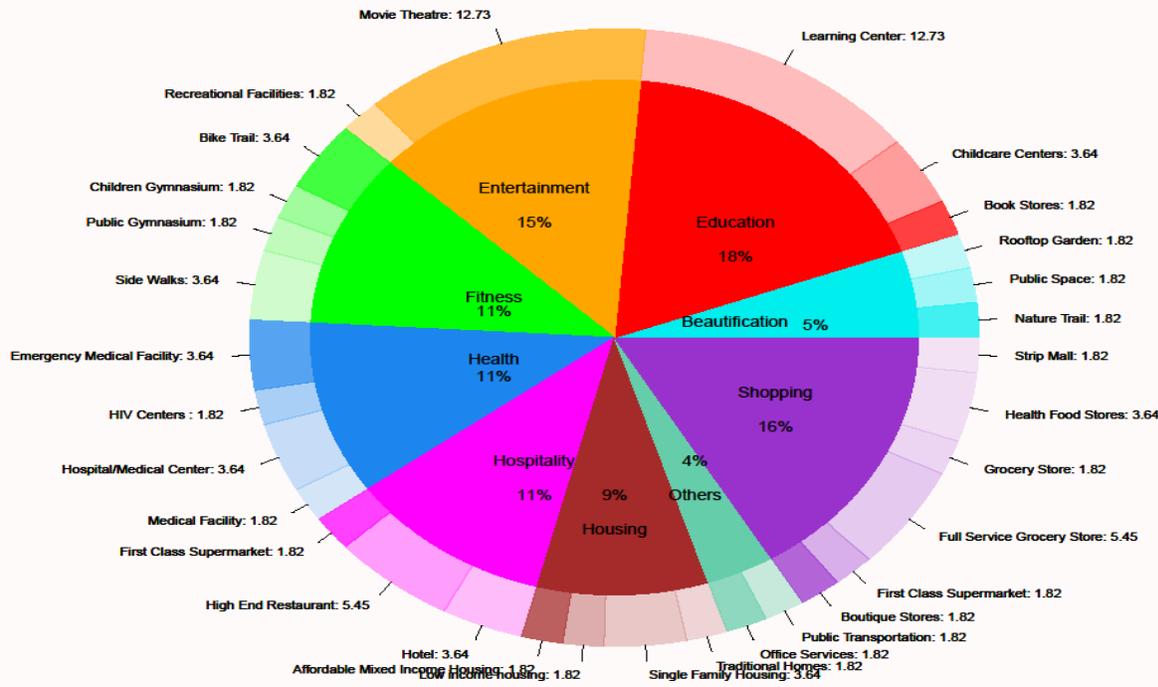

The study conclude that there was no statistical significance difference on responces among age groups.

Source: Gilmore et al. (2012). Earl K Long Hospital Closure Community Assessment. Commisioned by the Greenwell Spring Airline Highway Development District and Conducted by Bayard research Group.

In March 2015, Senator Sharon Weston Broome, State Representative Regina Barrow, and Metro Council member Ronnie Edwards called a community meeting to discuss the issue of redeveloping the property. The community members were asked three questions: What is missing in North Baton Rouge? What would you like to see built at the former Earl K. Long Medical Center? What would you do not like to see built at the former Earl K. Long Medical Center? The responses for each questions are summarized below.

What is Missing in North Baton Rouge ?

Summary From Sixteen Questionnaires (numbers are percent frequency)

Donut Plot: Dr Kaliba

Competing missing amenities include adult education services, shopping and entertainment facilities.

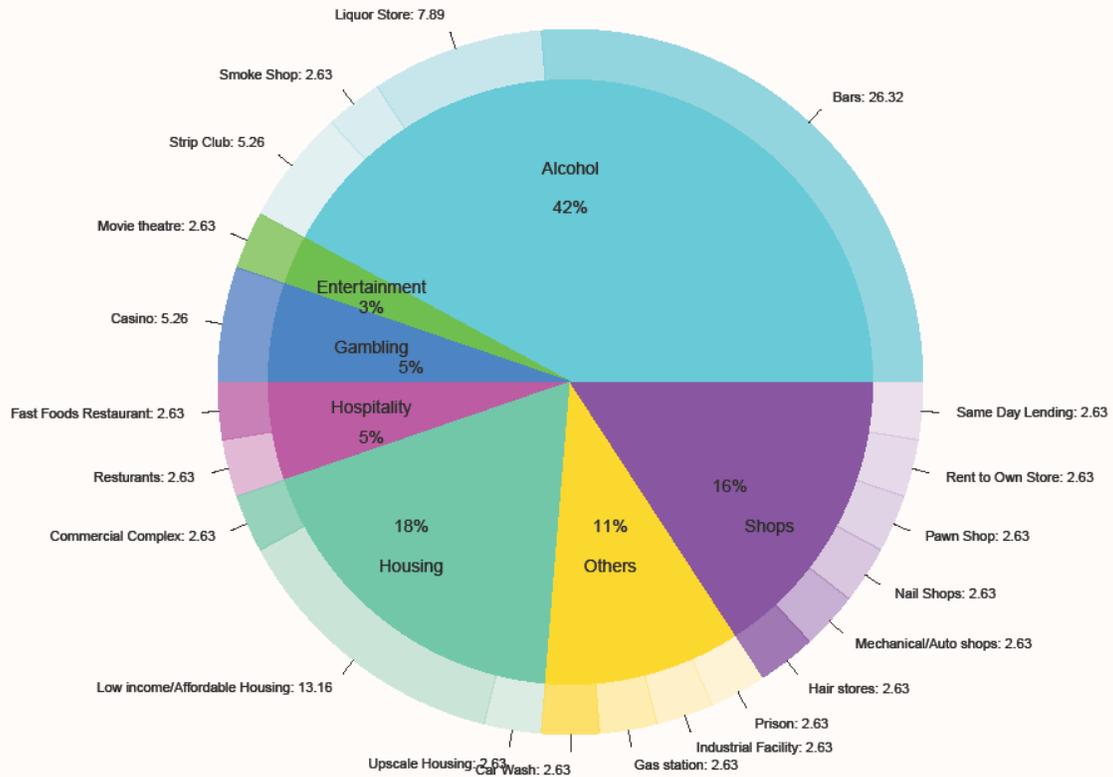

What is Missing in North Baton Rouge ?

Socio-Economic and Demographic Profile of Residents in the Six ZCTAs

Demography

Estimated Resident Population By ZIP Code Tabulation Area

The estimated resident population figure is the official population estimate from the census bureau five-year (2009/2013) American Community Survey. The American Community Survey (ACS) is an ongoing survey that provides data every year; giving communities the current information they need to plan investments and services. The primary advantage of using multiyear estimates is the increased statistical reliability of the data for less populated areas and small population subgroups such as the ZCTAs.

Distribution of age groups by gender in all six ZCTAs

Population Distribution by Gender

About 91% of the population (92% male and 89% of females) are below 64 years of age. The age group between 20 and 64 years accounted for 58% of the population. The respective numbers for male and female was 57% and 59%.

All Census Bureau demographic surveys collect information about the residents of each housing unit and how they are related. Under the U.S. Census Bureau definition, a family consists of two or more people related by birth, marriage, or adoption residing in the same housing unit. A household consists of all people who occupy a housing unit regardless of relationship. A household may consist of a person living alone or multiple unrelated individuals or families living together. Single or nonfamily households consist of people who live alone or who share their residence with unrelated individuals.

Family type is one of the factor affecting poverty, income, and socio-economic mobility in the US. Only 11% of single households earned more than \$99,999 annually, compared to more than 46% of married couples. More than 50% of the single households earned less than \$35,000.
