

Puyallup Station Access Improvements Project

September 2016

Access improvements

Project background

The Puyallup Station Access Improvements Project was approved by voters in 2008 as part of the Sound Transit 2 ballot measure to expand mass transit throughout the region. This project will improve access to the station for pedestrians, bicyclists and drivers. The garage will open for public use in 2021 and final construction of improvements will be completed by 2023.

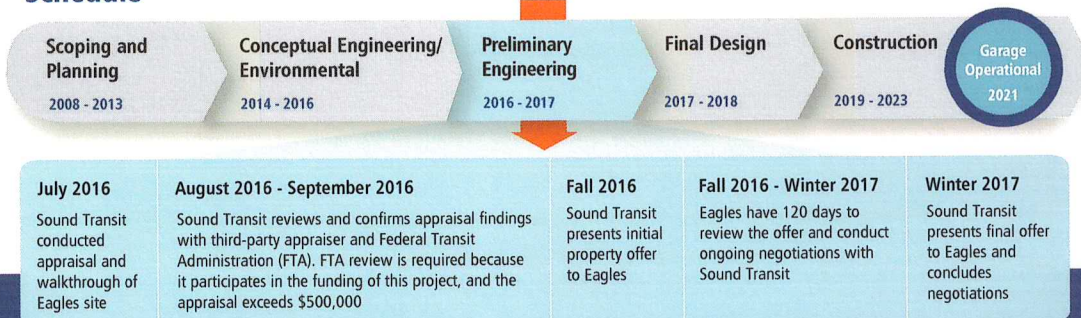

Project budget
\$60.2 million

As Sounder ridership grows, parking demand increases. Sound Transit estimates 400 to 600 additional parking spaces will be needed to keep up with demand at the Puyallup Station. The Sound Transit Board selected project includes building a garage with 503 spaces and adjacent expanded surface parking to accommodate demand.

Access improvements also include a pedestrian bridge over 5th Street Northwest, sidewalk and pedestrian lighting, and improved pedestrian and bicycle connections to improve access to the station. The Sound Transit Board selected the list of access improvements to build in April 2016.
