

Symptoms of wireless exposure:

- Headaches
- Dizziness
- Memory & Concentration Problems
- Nosebleeds
- Fainting
- Skin Rashes
- Irregular Heartbeat
- Blacking Out
- Depression
- Nausea

Did you know wireless devices such as cell phones, laptops, tablets & Wi-Fi routers emit microwave radiation?

What You Need to Know

- Classrooms with routers and devices that emit microwave radiation put students at risk for Electromagnetic Hypersensitivity (EHS).
- Symptoms of exposure may improve or clear after the wireless technology is turned off or the student leaves the environment.
- Strength, duration of exposure, student's age, pre-existing conditions and other toxic exposures may also be contributing factors.
- Doctors who are able to diagnose and treat EHS symptoms can be found on the American Academy of Environmental Medicine's referral data base: <<http://www.aaemonline.org/referral.php>>.
- For more information and resources on this topic, please visit <<http://www.nacst.org/electromagnetic-hypersensitivity.html>>.

Students deserve a
school environment free
of microwave radiation.
