New Zealand Gov. Railway, Greymouth, South Island

SECTION 2 OF 3

The ride of a lifetime...

A Steam Odyssey

By Earl Brechlin ebrechlin@mdislander.com

It's a journey that has taken more than 50 years and covered more than two million miles. And, it's a trip back through time as well, to an era when billows of cinder-filled smoke, shrieking plumes of stam, and grease and oil-soaked steel were, literally, the divining engines of industrial

soaked steel were, literally, the driving engines of industrial civilization. For Victor Hand of Bar Harbor, the allure of steam lo-comotives is the crowning glo-ry of his long love affair with railroads. It began in his teens, eventually formed the founda-tion of a lucrative career in the railroad industry, and contin-ues today in his hobbies.

A STEAM ODYSSEY

British Railways, York, England

British Railways, York, Englainforced his surgeon father's belief his son would make a good doctor. But young Victor had other plans, taking his first railroad photo in Europe in 1955 while vacationing with his parents. Even when he abandoned a pre-med track in favor of law school, photographing trains was already becoming an all-consuming pursuit. It is a passion that has driven him to travel the globe in search of a vanishing and elusive quarry—the last working steam locomotives.

The incredible, dynamic black and white images he created during his travels have now been released in "A Steam Odyssey," a stunning new book by W.W. Norton of New York. Homer himself would be proud of Mr. Hand's quest.

And Along the way, Mr. Hand dodged malaria, was detained by police, and was stalked by lions. He has endured hordes of biting insects, the scorching desert sun and howling snows of Manchuria. He has waited patiently, precariously perched on a cliff in Ecuador, and spent hours coordinating the oncein-a-lifetime simultaneous arrival of three trains at a junction in Italy.

And, in an age when photographers click off five frames a second generating thousands of images during a single shoot, Mr. Hand has done it the old

fashioned way – with a 4x6inch Graflex Speed Graphic
camera and just a few sheets
of film. Focus, shutter speed,
fstop, all are set by hand with
the aid of a hand-held light
meter. At night, a series of
large flashbulbs, sometimes
triggered by an electronic circuit Mr. Hand built himself,
provided the lighting.
The result is nothing short
of high art – that rare blend of
subject, lighting, composition,
exposure, development, printing and sense of tonality seldom seen in our digital world.
The resulting images transcend
the reality of the subjects.
It's a fine-art follow up to his
most popular railroad book,
'The Love of Trains,' which
has sold tens of thousands of
copies and has been translated
into four languages.

"The whole process has
dominated my life,' Mr. Hand
said during a recent interview
at his home in Hulls Cove
where he lives with his wife Patricia, Administrative Director
of the MDI Biological Laboratory.

Career wise, Mr. Hand
worked a variety of jobs in the
railroad industry, from entrylevel fireman to eventually becoming a management consultant for the creation of Conrail.

His photography first drew

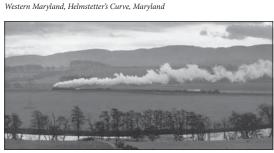

Meet the author

BAR HARBOR — Victor Hand will share slides and stories from his gorgeous new photo book, "A Steam Odyssey" at the Jesup Memorial Library, 34 Mount Desert St., on Thursday, Dec. 19 beginning at 7 p.m. And just in time for Christmas, the books will be on sale during a book signing after the talk courtesy of Sherman's Books; part of the proceeds from all sales will be donated to the Jesup. Call 288-4245.
