## Introduction

The Brief Kingston Standardized Cognitive Assessment-Revised is an instrument that has been designed to quickly screen individuals suspected of having brain damage; especially progressive dementias in the elderly. It is a test that can assess a number of cognitive capabilities but concentrates on those commonly associated with dementia, especially in the early stages. Individuals can be compared to a group of outpatients with probable Alzheimer's disease or to a community dwelling normal elderly sample. Norms are also provided for a group of out-patients who were diagnosed with depression, but not dementia. While it is not diagnostic, the BriefKSCAr alerts the user to the possibility of an existing organic process and raises the question of whether further evaluation is needed.

One of the main values of the BriefKSCAr is that it provides comprehensive screening of potentially brain damaged patients without special training or specially trained personnel, and can typically be completed in about 15 minutes.

The companion to this manual is the "Assessment Form" which is the protocol used to assess a patient and contains all of the forms necessary; only a pencil needs to be provided.

In addition to the BriefKSCAr, there is the BriefKSCAr which is a longer and more wide ranging version. While the full BriefKSCAr is recommended for initial or more comprehensive screening, especially when the scope of the possible brain damage is unclear, the BriefKSCAr can also be used as a fast and reliable bedside procedure that yields far more data than other cognitive screening tools commonly in use, such as the MMSE. It can also be used to monitor a patient's change over time.

## General Scoring Notes:

- Many elderly people have some degree of hearing loss; make sure the patient understands the questions and instructions. Speak slowly and clearly; ask him/her to let you know if he/she has trouble understanding you. Repeat if necessary. In addition, many patients have some degree of visual impairment; make sure the patient can see the designs and pictures adequately.
- If the patient has enough difficulty in hearing instructions or seeing the designs to make interpretation of the results questionable, DO NOT SCORE THOSE ITEMS.
- If the patient gives a wrong response but corrects him/herself spontaneously, BEFORE starting the next sub-test, the second response IS scored; but DON'T use the self-corrected answers that occur after you have gone on to something else, use the original response for scoring purposes.
- If you wish to probe a patient further (i.e., "testing the limits") you may do so; make note of any additional responses, but SCORE ONLY THE ORIGINAL RESPONSE.
- WRITE DOWN ALL RESPONSES. The response lines are provided not just to make occasional notes but to make the BriefKSCAr a complete record of the assessment that can be compared to future examinations.
- IF A SUB-TEST IS NOT SCORED FOR ANY REASON, A TOTAL SCORE CANNOT BE ObTAINED, NORMALLY HOWEVER, FAILURE OF A PATIENT TO COMPLETE A SUB-TEST RESULTS IN A SCORE OF ZERO FOR THAT SUB-TEST. KINGSTON SCALES

## Introduction

The Use of This Manual
While each Assessment Form contains administration instructions and some statistical data, this manual does so in greater detail, and in addition, provides information about the scoring and interpretation of the BriefKSCAr. Each sub-test section is organized under the same headings: Name, Purpose, Administration Instructions (with what the examiner actually says to the patient shown in UPPER CASE AND BOLDED), Scoring Procedure, Maximum Total Score, Acceptable Answers (and sometimes unacceptable answers), Interpretation, Templates (where applicable), and Examples (where applicable).

One feature found in the BriefKSCAr that is rarely found in other scales, is the provision of templates to aid in scoring the items where the subject is asked to draw something. The templates are produced in the proper size to allow the examiner to place the patient's reproduction over top of the template to determine whether the angles or spacing etc, is correct.

While each sub-test has an interpretation section, this is only intended as a guide. Those listed are common interpretations, used most frequently when a patient is suffering from a progressive dementia such as Alzheimer's Disease. However, where different etiologies are involved, alternative interpretations may be applicable.

An important part of the BriefKSCAr is the section entitled "Observations During Examination". This is a simple checklist for the clinician to make observations about the behaviour of the patient during assessment. It allows one to make note of language and other important behaviours. It is particularly useful for picking up behaviour changes that are not noted by cognitive assessment alone.

This manual contains statistics (i.e. means, percentiles, etc.) for groups of normal elderly (p. 25), Alzheimer's patients (p. 26), and a group of depressed patients (p. 27). The group labelled "Dementia", on the "Score Analysis Pages" is the Dementia - Alzheimer's group. When newly assessing a patient for whom there is no definitive diagnosis, this group should be used for a first comparison. If the individual is known, or suspected of having a diagnosis of depression, then that group should be used for comparison purposes. It should be noted that the Alzheimer's group used in these norms is drawn from a mostly community living sample (i.e. over $90 \%$ of the sample lived in the community either with or without supports). It is important to consider the type of patient when interpreting the scores.

A more complete and effective assessment of a suspected dementia should also include a behavioural assessment, such as can be obtained by using the Kingston Standardized Behavioural Assessment (KSBA) (Hopkins R, Kilik L, Day D, Bradford L, Rows C, 2006 "Kingston Standardized Behavioural Assessment" Am J Alzheimer's Dis, 21: 339-346).

Hopkins R, Kilik L, Day D, Rows C, Hamilton P. 2005. The Brief Kingston Standardized Cognitive
Assessment -Revised. Int J Geriatr Psychiatry 20, 227-231.

```
SUBTEST NO. }
ORIENTATION
```

Purpose
Administration Instructions

Scoring Procedure
Maximum Total Score
Interpretation

To assess recent memory through general level of orientation to person, time and place.

Ask each as presented in quotation marks below.
[REMEMBER TO WRITE DOWN ALL RESPONSES]

One point per question is given for each correct response.

10
A poor performance suggests problems with short term or recent memory. This is a common finding in typical dementias such as Alzheimer's disease but is not necessarily a prominent feature in other forms of dementia. Especially those that are not progressive such as delirium.

## Acceptable Answers

1. "WHAT IS YOUR FULL NAME?"
2. "WHAT IS YOUR AGE?"
3. "WHAT IS YOUR BIRTH DATE?"
4. "WHERE ARE WE NOW?"
5. "WHAT CITY (TOWN etc.) IS THIS?"
6. "WHAT DAY OF THE WEEK IS THIS?"
7. "WHAT MONTH IS THIS?"
8. "WHAT YEAR IS THIS?"
9. "WHAT IS THE TIME OF DAY?"
10. "WHAT IS THE SEASON?"

- at least one given name \& last name
- age, not 'date of birth', if they give DOB say
"Yes, but how old does that make you."
- date of birth, not 'birthday'
- at least 'hospital', or type, or name of institution whatever type of building it is (e.g., house, apartment, nursing home)
- name of city, town, village (not subdivision)
- correct day
- correct month
- correct year
- correct time within 90 min.
- correct season

| SUBTEST NO. 2 | $\quad$ WORD RECALL |
| :--- | :--- |
| Purpose | To assess short term verbal memory |
| Administration | Use the 10 word list (TABLE, FOOTBALL, WINDOW, ... <br> APPLE). Using a blank sheet of paper (supplied), slide it <br> down the list of words, sequentially exposing the list one <br> word at a time. Present each word for 2 seconds. Ask the <br> subject to "PLEASE READ ALOUD EACH WORD THAT I <br> SHOW YOU." <br> DO NOT TELL THE SUBJECT TO TRY AND REMEMBER <br> THEM. After presenting all 10 words, cover the list <br> completety or otherwise ensure that it is not visible and ask <br> the subject <br> "PEASE TELL ME AS MANY OF THE WORDS FROM <br> THAT LIST AS YOU CAN, IN ANY ORDER." |
| Scoring Procedure | 1 Point for each correct response. |

## SUBTEST NO. 3

Purpose
Administration
Instructions
Scoring Procedure

Maximum Total Score
Interpretation

## Acceptable Answers

1. "In what way are carrots and beans alike?"
2. "In what way are a shirt and a sweater alike?"
3. "In what way are a dog and a cow alike?"
4. "In what way are a car and a bicycle alike?"

## ABSTRACT THINKING

To assess one's ability to perform abstract reasoning.
Ask each question as written. Prompt responses only on the first two.

General Remarks:
2 Points - highest level of appropriate abstraction or major use
1 Point - minor similarities; superficial or descriptive only
8

Difficulties with this task suggest problems in abstract reasoning, which is an executive function often associated with frontal lobe damage.

2 Points - vegetables; you eat them; food;
1 Point - have vitamins; grow in ground; plants; If patient fails to give a 2 -point answer say,
"THEY ARE BOTH VEGETABLES."
2 Points - clothing; apparel; attire; you wear them;
1 Point - they are made of cloth (material); have sleeves
(buttons);cover upper part of the body; [same help as above]

2 Points - animals (mammals);
1 Point - they have 4 legs; are found on farms. [no help]

2 Points - means of transportation (travelling); vehicles; - they take you places; you ride them;

1 Point - they have wheels; carry people; you steer them. [no help]

SUBTEST NO. 4
Purpose
Administration
Instructions

Scoring Procedure

Interpretation
Acceptable Answers

## SPATIAL REVERSAL

To assess one's ability to spatially reverse an object from the way that it was presented.

Point to the arrow. "NOW I WANT YOU TO DRAW ANOTHER ONE LIKE THIS, BUT THIS TIME POINTING THE OPPOSITE WAY"
Avoid indicating direction.
5 Points - arrow must be in opposite direction

- Horizontal axis rotated less than 15 degrees. Use Figure H -a. Place left edge of drawing parallel to left edge of template so that left vertex is on point ' $\mathbf{C}$ '. 'Shaft' of arrow should be between the lines marked 'b';

5

Inability to reverse a figure is an indication of at least moderate spatial dysfunction.
see examples below

Template: Figure A

Examples: 0 Points

5 Points

Purpose
Maximum Total Score
Interpretation

## Administration Instructions a) NUMBERS [ ${ }^{\text {st }}$ blank circle]

Scoring Procedure
a) NUMBERS

## CLOCK DRAWING

Clock drawing is another test of visual-motor functioning.

## 7

Clock drawing is a sensitive measure of visual-motor function, and problems with this task are often seen as an early sign of dementia.
"I WANT YOU TO WRITE IN THE NUMBERS, AS ON A CLOCK FACE" If patient writes only some of the numbers, e.g. $3,6,9,12$, say, "PLEASE, WRITE ALL OF THE

NUMBERS" Make sure that the top of the clock (i.e. the 12), is at the top of the page. If not, mark top (i.e. patient's top).

USE FIGURE I and examples on page 35.
2 Points - numbers 1-12 (and no extra numbers) fairly straight and nearly evenly spaced around periphery, with the 12 at the top. When the reproduction is placed over Figure I with the 12 placed at the top of vertical line ( $L^{\prime}$ ), the major part of the 3,6 and 9 should be in the appropriate areas marked ' $\mathbf{a}$ ';

- main bodies of ALL numbers should be within the outer ring marked 'b';
- not more than one number rotated 90 degrees or more

1 Point - some distortion in spacing of numbers is acceptable, i.e., when reproduction is placed over Figure I, so that the 12 lies on the vertical line ( L L'), the major part of any $\underline{2}$ of the numbers 3,6 and 9 should be in the appropriate areas marked ' $\mathbf{a}$ ';

- main bodies of all but $\underline{1}$ of the numbers should be within the outer ring 'b';
- no extra numbers can be included

2

## SUBTEST NO. 5

## CLOCK DRAWING

Administration Instructions
b) 9:00 [2 ${ }^{\text {nd }}$ blank - circle]

Scoring Procedure
b) $9: 00$
"ON THIS CIRCLE DRAW IN THE HANDS TO MAKE IT SAY 9 O'CLOCK."

USE FIGURE J and examples on page 36.
2 Points

- using Figure J, the vertex should be centred within the area marked ' $a$ ', the 'hands' should fall in the tracks marked 'b'.
-'hands' should be connected (or almost connected) at an approximate right angle;
- hour 'hand' SHORTER than minute 'hand'.

1 Point

- connecting point of 'hands' off-centre but within the larger central circle marked ' $c$ ';
- hour 'hand' NOT LONGER than minute hand;
- if 'hands' are not connected, both should radiate from larger central area marked ' $c$ '

2
"NOW TRY THIS ONE. PUT IN THE HANDS FOR 5 PAST 10. MAKE IT SAY 5 PAST 10"
c) $10: 05 \quad\left[3^{\text {rd }}\right.$ circle numbered]

Scoring Procedure
c) $10: 05$

Maximum Score c) 10:05

Administration Instructions
d) $8: 20 \quad\left[4^{\text {th }}\right.$ circle numbered and hands]
Scoring Procedure d) 8:20 1 point for 8:20 (or 20 past 8)
Maximum Score d) 8:20 1

Say, "WHAT TIME IS IT ON THIS CLOCK?"

- follow scoring guidelines for 9:00 o'clock. See examples on page 37.
- place 10:05 clock face over Figure J, and rotate it so that the numbers 10 and 1 are inside the shaded areas marked ' $a$ ';

2
anduers to and I are inside tne snaded areas marked 'a';

## PERSEVERATION

Purpose<br>Administration Instructions<br>a) Motor Pattern

## Scoring Procedure

Administration Instructions
b) Visual Pattern

Scoring Procedure

Maximum Total Score
Interpretation

To assess one's ability to perform several complex repetitive motor tasks without repeating parts of the task out of sequence.

Demonstrate touching table alternately first with palm of hand and then with fist on edge, i.e.,thumb facing up. Movements should be alternated at a rate of not faster than one movement per $1 / 2$ second and no slower than one movement per second. Have the patient copy your motions for 5 trials or until you are sure that the patient has learned the pattern. If patient is unable to learn the task within 10 trials, discontinue and score 0 . If patient has successfully learned the task, say:

## "I WANT YOU TO REPEAT THIS MOVEMENT ON YOUR OWN UNTIL I SAY 'STOP'."

If their response degrades before 5 repetitions, say "STOP". Otherwise let him/her do at least five repetitions using his/her preferred hand.

1 Point - if patient is able to complete at least 5 repetitions on his/her own, without any alternation errors.
"I WANT YOU TO COPY THIS PATTERN. START COPYING BELOW THE EXAMPLE, AND THEN CONTINUE IT TO THE END OF THE PAGE. START HERE..." (Pointing to the correct position.) Encourage patient to continue to right margin of page.

1 Point for any reasonable copy; rectangular and pointed shapes should be clearly distinguished;
1 isolated error EARLY ON is permissible.

2

Problems with these tasks are usually indicative of an inability to switch cognitive sets, and is associated with frontal lobe dysfunction.

CO Brief KSCAr Instruction and Scoring Manual

Examples: -

1 Point

0 Points

| SUBTEST NO. 7 | $\quad$ DELAYED WORD RECALL |
| :--- | :--- |
| Purpose | To assess short term verbal memory with a delay of 10 to 15 <br> minutes. |
| Administration <br> Instructions | After 15 minutes (approximately) ask the subject <br> "PLEASE TELL ME AS MANY WORDS THAT YOU CAN <br> REMEMBER FROM THE LIST THAT I SHOWED TO YOU <br> EARLIER, IN ANY ORDER." |
| Scoring Procedure | 1 Point for each correct response |
| Maximum Total Score | 10 |
| Interpretation | A delay between learning and recall is not usually problematic for <br> someone without brain damage, but if brain damage is present it <br> often shows up as a reduced capacity to remember material after <br> a delay. This is often one of the first signs of brain damage. |
| Acceptable Answers | Responses must match the words on the list exactly. <br> Substitutions or intrusions are not scored but should be noted. |

| SUBTEST NO. 8 | $\quad$ WORD RECOGNITION |
| :--- | :--- |
| Purpose | To assess one's ability to make use of partial information in <br> assisting one to recognize learned material. |
| Administration | After completing the delayed recall, show the subject the second <br> list of 20 words [2 sheets] (TABLE, HOUSE, BOWL, .. BIRD), <br> point to the first word and say to the subject <br> "DID YOU SEE THIS WORD ON THE LIST THAT I SHOWED <br> TO YOU EARLIER OR IS THIS A NEW WORD?", <br> Repeat these instructions for the 2nd word. But for the 3rd word <br> say "HOW ABOUT THIS ONE?" <br> For the 4th word onward, use either instruction as seems <br> necessary. After completing the 1st page, go to the second one <br> (GLOVE, KING ....) |
| Scoring Procedure | 1 Point for each word correctly identified as being either "in" or <br> "not in" the list. Divide points by 2 for total score out of 10. <br> i.e. IN/10 + NOT IN/10 = Total/20 $\div 2$ (max = 10) |
| Maximum Total Score | 10 |
| Interpretation | Usually patients suffering from Alzheimer's disease will perform <br> relatively poorly on free recall and delayed recall, but will perform <br> at near normal levels on recognition memory. |

Purpose
Administration Instructions

Scoring Procedure

## OBSERVATIONS DURING EXAMINATION

These short scales allow the clinician to rate certain behaviours observed during the assessment procedure.

This section is used to rate patient behaviour during the examination. Items $\mathbf{a}$ and $\mathbf{b}$ are rated from 1 to 5 . A normal rating is 3 and values above or below 3 indicate the degree of deviation from normal. Items $\mathbf{c}$ to $\mathbf{j}$ are rated from 1 to 3 . A normal rating is 1 , and 2 or 3 indicate the degree of deviation from normal.

Although this is not part of the total score, it is an important part of creating an impression of the individual's presentation and a valuable aspect of the overall clinical picture.

## BEHAVIOUR AT TIME OF EXAMINATION

a] OVERLY PERSISTENT $1 \begin{array}{llllll}2 & 3 & 4 & 5 & \text { GIVES UP EASILY }\end{array}$

- Did the patient work persistently and refuse to give up on tasks, or did he/she stop as soon as he/she encountered any difficulty or frustration?
b] UNCONCERNED $\begin{array}{lllllll}1 & 2 & 3 & 4 & 5 & \text { ANXIOUS }\end{array}$
- Did the patient show any undue anxiety about the examination, or did he/she act is if he/she was completely unconcerned?
c] RELAXED
123
RESTLESS
- Was the patient relaxed, at ease with the examination or was he/she restless, having difficulty attending to tasks because of it?
d] FULLY ALERT $1 \quad 2 \quad 3 \quad$ DEPRESSED LEVEL
- Was the patient fully alert or was his/her level of consciousness decreased?
e] GOOD CONCENTRATION 1 EASILY DISTRACTED
- Was the patient able to concentrate on the tasks without too much difficulty, or was he/she easily distracted and have difficulty concentrating?

## f] COOPERATIVE 1 U 2 UNCOOPERATIVE

- Was the patient cooperative to the examination procedures or was he/she less than willing to participate?

## LANGUAGE USAGE

g] ARTICULATION GOOD 1223 ARTICULATION POOR

- Was the patient's articulation good, or did he/she have difficulty pronouncing words (either common or uncommon)?

## h] SPONTANEOUS SPEECH 123 SPEAKS ONLY WHEN <br> SPOKEN TO

- Did the patient speak spontaneously to a normal degree or was he/she reluctant to speak?
i] FLUENT SPEECH 1223 NON FLUENT SPEECH
- Was the patient able to speak fluently, without obvious breaks or periods where he/she was searching for words?
j] NORMAL SPEECH 123 PERSEVERATIVE SPEECH
- Did the patient display a number of perseverative behaviours in his/her speech, such as repeating words or phrases over and over again? Was there repetition of ideas or responses, such as giving the same specific response (versus a general response such as "I don't know") to different questions?

## Brief KSCAr SCORE ANALYSIS PAGES

This section of the BriefKSCAr is designed to make the analysis of the scores easier and more meaningful. To aid in this, the BriefKSCAr scores are translated into percentiles which make the scores more easily compared across patients. Percentiles are a simple way of describing how a person did relative to a larger group of other people on a particular task. If there were a number of different people being compared on a test, their performances would vary; some would do poorly and others would do very well. These scores could then be ranked from lowest to highest. Percentiles do this using a scale of 1 to 100. Someone with an excellent score would have more people who did worse than them, and fewer who did better, so their ranking would be higher (e.g.. the $90^{\text {th }}$ percentile). Conversely, someone who did poorly on that test would be ranked lower, as more people were able to do better (e.g.. the $20^{\text {th }}$ percentile). If someone has a score at the $70^{\text {th }}$ percentile, it can be said that he or she performed as well or better than 70 percent of the people that have taken the test. If you were a person with a score that was right in the middle, you'd be ranked at the $50^{\text {th }}$ percentile, meaning there were as many people who did better than you on that test as there were people who did worse than you. In general, percentiles make interpreting performance easier, as scores are always converted to a scale of 1 to 100 .

After a patient has completed a BriefKSCAr and you have scored all the sub-tests, tally the scores on the "Scoring Summary" (page 19), then, use the "Score Analysis Pages" (20-21) and follow the steps as outlined below in order to calculate the percentiles and determine the patient's level of performance.

STEP 1: MAKE AN ESTIMATION OF THE LEVEL THAT THE PATIENT FUNCTIONED AT PRIOR TO HIS OR HER CURRENT ILLNESS (or condition that resulted in this assessment).
This is called the premorbid level of functioning.
Did the individual have more than average education (or less)? Did the individual have a number of hobbies? More education, and more hobbies or interests usually indicate higher levels of functioning. How do family and friends regard the individual? Do they describe the individual as "smart", "very bright" or "clever", or the opposite, or "average". Remember that most people will fall into the "average" range unless, you have some clear evidence such as suggested above, that they functioned above or below it.

STEP 2: USING THE "SCORE ANALYSIS PAGE 1" (Assessment Form Page 20), LOCATE THE CHART LABELLED "NORMALS" AND CIRCLE THE PATIENT'S TOTAL SCORE (left hand column). READ THE CORRESPONDING PERCENTILE FROM THE MIDDLE COLUMN. THE THIRD COLUMN, (i.e. right hand column), WILL SHOW WHAT RANGE THE TOTAL SCORE FALLS IN. (See Note 1.)

STEP 3: IS THE PATIENT'S SCORE IN OR ABOVE THE RANGE (Premorbid Estimate) THAT YOU ESTABLISHED IN STEP I? IF SO, NO FURTHER ANALYSIS IS REQUIRED. THE PATIENT IS NOT LIKELY SHOWING ANY MEASURABLE DECLINE FROM PREVIOUS LEVELS. THEREFORE, SIGNIFICANT DEMENTIA IS UNLIKELY.

ON THE OTHER HAND, IF THE PATIENT'S CURRENT LEVEL OF FUNCTIONING IS BELOW YOUR ESTIMATED PREMORBID LEVEL, MOVE ON TO STEP 4. (See Note 2.)

STEP 4: NOW COMPARE THE PATIENT’S TOTAL SCORE TO THE ‘DEMENTIA’ DISTRIBUTION USING "SCORE ANALYSIS PAGE 2" (Page 21), OBTAINING BOTH THE PERCENTILE AND DESCRIPTIVE RANGE FOR THAT SCORE.

## NOTES:

3. What if a score falls between two percentiles? - If the score falls between two percentiles (e.g. a total score of 29 falls between the $30^{\text {th }}$ and $35^{\text {th }}$ percentiles for normals), one can say that the score is at "approximately the $34^{\text {th }}$ percentile", or falls "just below the $35^{\text {th }}$ percentile", or "just above the $30^{\text {th }}$ percentile".
4. Can one get half scores? - It should also be noted that due to Word Recognition, half scores are often possible. For brevity, only some are shown in the percentile conversion charts.

6 Different charts, different values? - It should be noted that the percentile conversion charts for each group in the back of this manual and the "Total Score Percentiles" chart on page 24 (of this manual) are set up differently. The chart on page 24 is divided up into intervals of every 5 percentile points (e.g. $30^{\text {th }}$, $35^{\text {th }}, 40^{\text {th }}$ etc.) with the scores calculated to fit them. This often produces scores that are not possible to actually obtain, but are mathematically correct (e.g. 33.3, 33.8). On the other hand, the group charts in the back of this manual use actual scores (e.g. 37, 38, 39 ...) with the corresponding percentiles calculated to fit, and often appear as fractions (e.g. 72.7, 74.8, 75.8...). Quoting percentiles as decimal fractions is mathematically acceptable. In the Assessment Form Score Analysis Pages a combination of these styles are used. Only obtainable scores with their approximate percentiles are given for roughly every 5 percentile points.
$6 \quad$ My patient couldn't complete all of the subtests. Can I still get any useable information from the BriefKSCAr? - In clinical practice, this situation can arise with individuals who have significantly impaired vision, such as in cases of advanced cataracts or Macular Degeneration; it can also occur if the person doesn't have sufficient motor control to use a pencil. Alternatively, in very rare cases, a patient may discontinue the test before its completion. In these cases, you can still use the information from any of the subtests that were completely administered. Simply look up the sub-test percentile values that are provided in the manual. You can then comment on where the person is functioning within that sub-test with respect to the percentiles. If you feel that additional testing data are needed, a referral for neuropsychological testing would be appropriate.
$7 \quad$ At this point, a cautionary note about sub-test percentiles is warranted. As mentioned above in note 2, percentiles, where the range of possible values is limited, often appear very low, and this is especially true in the case of sub-test scores. Again, it has to be remembered that even with a perfect score (e.g. 10 out of 10) the given percentile may be very low (e.g. 6.1). This seemingly strange result arises when, in this example, $93.9 \%$ of the sample all scored 10. Therefore, the percentile range is really from 6.1 to 100 , but by convention the lower value is used. However, it must be remembered that the true percentile position could be considered 100. A score of one point less (i.e. 9 out of 10 ) may be listed as at the $2^{\text {nd }}$ percentile. Meaning that it actually has a range from as low as the $2^{\text {nd }}$ and as high as to the $6^{\text {th }}$ percentile.
