

More power to you.

Enjoy performance and convenience all rolled into one. When you choose QMotion® Low Voltage Shades, you get the ultra quiet operation QMotion® is known for, plus a simple, more flexible alternative to wired-in shades. Our Low Voltage Shades also offer:

- 12V power supply, so there is no need for complicated or unsightly electrical work.
- Optional battery back up gives you peace of mind knowing your shades can still operate in the event of a power failure.
- Custom panels that allow you to power as many as 16 shades for optimum flexibility and efficiency.
- Because your shades are controlled through all other QMotion® control technologies, the QMotion® Timer Remote and QConnect, among others, may be used with these systems.
- Manual override settings that allow you to adjust your shades to your precise specifications.

After all, when you choose Low Voltage Shades, you're getting the quiet, convenient performance of QMotion® Shades, with low voltage power option that provides uninterrupted service, year after year.

Single and multiple shade capabilities give you more control and flexibility.
