

CADAVER ANATOMY REVIEW

SATURDAY DECEMBER 7, 2019

HANOVER, NH

Cadaver Anatomy Overview:

Join me as we explore human anatomy in this one-day, eight hour cadaver anatomy overview. We have 2-4 embalmed cadavers that I have prosected (dissected ahead of time) to reveal the musculo-skeletal system, fascial layers and visceral attachments. In addition, we will be able to examine the major nerves and vasculature. The format of this class will be lecture and lots of hands on. The class is limited to a small number of participants to allow for maximum participation. No dissection will be performed. You will be able to touch and move tissue to examine all dissected structures. Out of respect to the donors no pictures will be allowed in this lab.

Course Objectives: At the end of this course the participant will be able to:

1. Identify major skeletal bones and their surface landmarks.
2. Identify all of the body's major articulations.
3. Identify and name correctly all major groups of skeletal muscles of the body.
4. Identify and name major muscle bony attachments and major actions.
5. Identify and locate the major ligaments, cartilage and bursae.
6. Locate and identify the major nerves and vasculature
7. Locate and identify major viscera and their attachments
8. Examine and identify the fascial layers
