

PENDLETON COMPRESSOR & PIPELINE

It is time to put more pressure on the politicians! We need your help!

Call NY State Reps Robert Ortt 716-434-0680 and Ray Walter 716-634-1895 and ask them to *introduce legislation to put an immediate stop to all pipeline expansion and construction in New York State until a full state-wide environmental review is done.* Tell them to stop putting National Fuel's profits above our Town's health. Tell them to contact Governor Cuomo directly and ask for his support in this matter put a stop to this, just like he did fracking. Tell them to come to Pendleton and see for themselves just how close the planned compressor is to our homes and school.

Call Niagara County Legislator Anthony Nemi 716-434-0133 again tell him to introduce legislation at the County level to stop all pipeline expansion and construction in Niagara County until a full state-wide environmental review is done. *Tell him to introduce legislation to ban heavy industrial construction - such as a 22,000 horsepower natural gas compressor station in the middle of a zoned residential area.* Tell him to introduce legislation to stop Niagara County from giving tax breaks to corporations who ignore our local Town's zoning and try to bully us into having this compressor in the middle of our Town, just so they can export the Marcellus Shale natural gas to Canada for a higher profit!

Call US Senator Schumer 716-846-4111 and Gillibrand 716-854-9725 ask them what they are doing to help us in Pendleton *stop National Fuel from manipulating the Federal Energy Regulatory Commission and ruining our Town so that they can export natural gas to Canada.* Tell them to have the EPA place a hold on all pipeline expansion and construction of compressors etc. until a full environmental study is done. Tell them to look at the News...see the weather extremes linked to global warming. National Fuel and their compressors are major sources of air pollution that "could pose a more immediate and local health hazard" - according to researchers at Drexel University (www.eurekalert.org/pub_releases/2015-05/du-maq052015.php) Take a look at that report for yourself. "In terms of persistent impacts to local air quality, compressor stations...are major sources of pollutants that have the potential to affect downwind air quality."

Call US Congressman Chris Collins 716-634-2324 and Brian Higgins 716-282-1274 tell them too.

WE ARE ALL GOING TO BE DOWNWIND OF THE PENDLETON COMPRESSOR IF YOU DON'T DO SOMETHING ABOUT IT.....MAKE THE CALLS AS SOON AS POSSIBLE. PASS THIS ALONG TO EVERYONE YOU KNOW...GET THEM TO CALL....WE NEED TO PUT AS MUCH PRESSURE ON THE POLITICIANS AS WE CAN. NATIONAL FUEL HAS UNLIMITED MONEY...WE DON'T!
