

## About GeneSight®

GeneSight is a laboratory developed genetic test that looks at many of the genes involved when your body processes certain types of medicines. It is the only genetic test that provides this combined view to help your healthcare provider know which medicines may be a match for your genes. GeneSight gives your healthcare provider important information to help you get on the right medicine.

Multiple clinical studies have shown that when healthcare providers used GeneSight to help guide treatment decisions, patients were twice as likely to respond to the selected medication. Plus, with treatment guided by GeneSight, patients saw a 70% greater improvement in their symptoms versus usual treatment.<sup>1</sup>

Many commercial and government insurance plans, including Medicare and the U.S. Department of Veterans Affairs, reimburse all or part of the cost of GeneSight. Assurex Health also offers financial assistance programs for patients who qualify.
