RAPTOR Z ARM

A powerful and precise shock absorber arm provides ultra-smooth stabilized car chasing scene when shooting at any speed on/off road or on water.

Quick & Easy Installation! No Technician Required.

SPRINGS ADJUSTMENT

Raptor Z arm features a finely balanced systems of adjustable springs and hydraulic dampers, allows users to achieve the perfect results in film tracking vehicle shooting.

Dual springs: 20 – 30kgs payload

Single spring: 10 – 20 kgs payload.

MOUNTING OPTION

Mounting the Raptor Z is as simple as clamping it (at back the arm) on to a standard 48-51mm Pole. Other standard grip components such as Poles and clamps can be mixed to provide different types of mounting configurations on vehicles.

VERSATILE WAY FOR SHOOTING

does not stop at making car-shooting (front, back or aside) shooting, this shock absorber arm also participates in bike, motorbike, rickshaw, boat scenes, remote arm, crane ... helps filmmakers get the shot. smooth

VARIOUS COMBO FOR YOUR NEEDS

Worked like modules separately, Raptor Z shock absorber arm adaptable and flexible in combo with Raptor XY or Raptor ISO for car chasing scenes from low to top shot, on rough terrain or paved roads
