

Constant Acceleration

The problem	v vs t graph	Solution
<p>1. A tiger can accelerate from rest to a speed of 28 m/s in 5.9. s.</p> <p>a) What is the average acceleration of the tiger?</p> <p>b) What distance does it travel in this time?</p>		
<p>2. At $t = 2$ s a car has a speed of 30. m/s. After 6.0 s, its speed is 14 m/s.</p> <p>What is its average acceleration during this time interval?</p>		
<p>3. Assuming constant acceleration how far does a plane taking off from 30miles/hr travel in 30 seconds to reach a speed of 400 miles/hr?</p>		
<p>4. A bus moving at an average deceleration is slowing from 60m/s to 10m/s so that he can pick up a student who is 400 meters away.</p> <p>How long does it take the bus to stop?</p>		

<p>5. A car whose initial speed is 30. m/s slows uniformly to 10. m/s in 5.0 seconds.</p> <p>a) Determine the acceleration of the car.</p> <p>b) Determine the distance it travels.</p>		
<p>6. A dog runs down his driveway with an initial speed of 5.0 m/s for 8.0 s, then uniformly increases his speed to 10. m/s in 5.0 s.</p> <p>a) What was his acceleration during the 2nd part of the motion?</p> <p>b) How long is the driveway assuming he reached the end after 12.0 seconds?</p>		
<p>7. A physics student skis down a hill, accelerating at a constant 2.0 m/s^2.</p> <p>If it takes her 15 s to reach the bottom, what is the length of the slope?</p>		
<p>8. A mountain goat starts a rock slide and the rocks crash 100. m down the slope. The rocks final velocity average out to be 75m/s.</p> <p>How long did it take for the rocks to reach the bottom of the mountain?</p>
