

Finding a Circle Center using a Compass and Ruler, Method 1

1 – Draw an arc using point A as center and point A to point B as the radius.

2 - Draw an arc using point B as center and point B to point A as the radius.

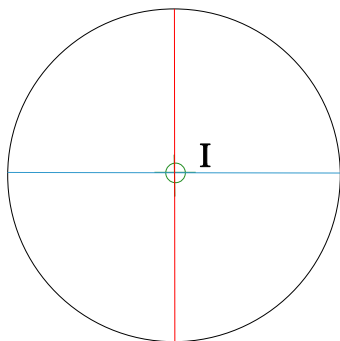

3 – Draw a line from point C to Point D.

4 – Draw an arc using point E as center and point E to point F as the radius.

5 - Draw an arc using point F as center and point F to point E as the radius.

6 – Draw a line from point G to Point G.

Remove the construction lines and point I is the circle center
