

Permanently erase acne scars, renew your skin and regain your confidence.

Trying to live with visible scars left behind by severe acne can cause emotional and physical distress. These scars can take the form of hypo- or hyperpigmentation; pitting (caused by poor collagen production); or over-production of scar tissue, which can lead to raised areas. For many years the only treatment options for acne scar removal were much too painful and invasive, and only minimally effective.

TYPES OF ACNE SCARS

- **Icepick scars** - Characterized by thin but deep columns of missing skin tissues. Commonly arising from severe acne, icepick scars usually appear on the cheek or nose.
- **Depressed fibrotic scars** - If ice-pick scars are somehow aggravated, they can transform into large, hard, crater-like scars
- **Macules** - Flat pigmented patches. Typically the end result of severe acne, appearing and persisting after the original inflammation.
- **Post-inflammatory hyperpigmentation** - Appears anywhere on the body and varies in size. Often caused by hormonal changes, and/or acne inflammation.
- **Soft scars** - Generally small, these vary in depth and shape
- **Atrophic macules** - Soft and sometimes blue or white. These can appear on the body as well as the face.
- **Follicular macular atrophy** - Small, raised, generally white bumps, usually seen on the chest or back.

ACNE SCAR TREATMENT

At Excellence Medical & Skincare Clinic we are proud to offer a variety of laser therapies to successfully treat all types of acne scars from superficial to deep acne scar tissue. Depending on the type of acne scarring, treatment plans will differ from patient to patient.

Fractional laser resurfacing is universally recognized as the most advanced treatment for acne scarring, reducing the appearance of acne scars by up to 80%. The fractional laser offers a degree of control and efficacy that allows for highly precise sculpting of the skin. The laser can target superficial to deep acne scar tissue and is ideal for patients who want dramatic results with minimal down time. The following are some of the approaches we use at Excellence Medical Skincare Clinic.

Fractional Laser Skin Resurfacing

To achieve excellent acne scar resurfacing results with minimal downtime, Excellence skincare clinic laser resurfacing is best choice. The Fractional Laser resurfacing uses thousands of microscopic laser columns to ablate narrow diameter channels into the skin, removing old damaged cells and stimulating the growth of new healthy cells. It is able to selectively cover a fraction of the total treatment area, while leaving surrounding healthy tissue untouched. The benefits of the Fractional Laser include increased patient comfort, rapid healing, and tunable results that can range from subtle to dramatic.

Palomar Fractional Skin Resurfacing Rejuvenation

Twin Light Fractional Rejuvenation is a simple 2-mode skin resurfacing and rejuvenation procedure that is performed ablatively with an **Er:YAG** laser and non-ablatively with a **Nd:YAG** laser for a comprehensive acne scar treatment. The deep heating effect of the Nd:YAG laser beam helps rejuvenate and stimulate the skin, while the Er:YAG beam promotes cell renewal and the formation of new, healthy skin. The treatment can be tuned so that the results meet patients expectations, from light touch ups to deep collagen remodeling. The treatment offers our medical experts a high degree of control and efficacy that permits the most precise and effective treatment. Fractional laser Rejuvenation is suitable for all skin types and tones. It is ideal for patients who want drastic improvements with minimal downtime.

Dual Fractional Laser Skin Resurfacing

Dual Fractional Laser Skin Resurfacing provides comprehensive results by offering customizable treatment using two treatment settings. The first treatment setting is the Fractional Laser. This Fractional Laser penetrates deep into the lower levels of the skin; it can be performed on its own or in combination with the second treatment setting, the Ultra-Laser Peel. The Ultra-Laser Peel provides full field treatment to remove superficial skin imperfections on the surface of the skin. Combining the Ultra-Laser Peel with the Fractional Laser will result in significant improvement to your acne scar in one session. Dual Fractional Laser Skin Resurfacing promotes rapid healing by stimulating the body's collagen production replacing the old damaged cells of the acne scars with healthy, luminous, youthful skin.

RESULTS OF FRACTIONAL LASER THERAPIES ON ACNE SCARS

- Improves texture by stimulating collagen production.
- Improves the hydration and texture of recuperating acne scars.

- Fades any hyperpigmentation or discoloration left behind from acne blemishes.
- Lifts divots allowing blemishes to blend seamlessly into healthy skin.
- Restores fresh, healthy more youthful appearance.

COMBINATION THERAPIES: IPL, LASER RESURFACING, MICRODERMABRASION, PEELS

For enhanced results, the Fractional Laser may be used in combination with other treatments.

The IPL and Laser Genesis treatments are incredible for specifically treating both fresh spots and vascular acne scars. They work by targeting blood vessels which cause the redness in the scar. The IPL treatment eradicates hyperpigmentation and softens the look of scars, hydrates damaged skin, stimulate collagen production and repair scar tissue.

SCHEDULE YOUR FREE CONSULTATION FOR ACNE SCAR REMOVAL

The approach chosen to treat your acne scars will be discussed after an in depth discussion during your consultation.
