

## PUMP SWITCH WITH BUILT-IN ALARM

SumpTek has paired extremely reliable primary and secondary backup switches with a sophisticated pump controller that monitors pump performance and the incoming water level. If high water or pump failure is detected the SumpTek controller will sound an alarm before costly flood damage occurs.

### Controller & Alarm

- Built-in high water alarm
- Automatically runs the pump once every 7 days to check if the pump is operational
- Monitors the pump for high or low motor current
- Detects if the pump is unplugged
- Sounds an alarm whenever a problem is detected
- Works with any sump or sewage pump under 15 amps

### Switch

- Primary switch will operate the pump during normal operation
- Secondary backup switch will continue to operate the pump if the primary switch fails, also serves as a high water sensor
- Extremely reliable design with no moving parts to wear out
- Outlast standard type switches
