

Ray's Leather Repair Cleaning & Conditioning Instructions

NOTE: PLEASE DETERMINE WHAT TYPE OF LEATHER YOU OWN BEFORE YOU BEGIN CLEANING OR CONDITIONING. CONTACT A PROFESSIONAL LEATHER TECHNICIAN PRIOR TO APPLICATION.

Cleaning : Ray's Cleaner Concentrate comes in a clear bottle. Dilute one bottle to one gallon of water. It can be used directly or one part cleaner to one part water. (Depending on the application.) **Only on protected leathers** soap up and

lather. Scrub the surface with a mild sponge or rag. A little soap goes a long way so use it sparingly. Let sit for a few minutes then wipe dry with a non-fibered rag or towel. (i.e. terry cloth, blue shop rags or sham-wow) May need to be repeated until the leather is clean. Work on one panel at a time, making sure it is evenly absorbing. This is very important with natural, or semi-aniline leathers. If **not** applied evenly it can cause spots or stains. Please consult a professional leather technician "**prior to application**" if you have any questions or concerns.

****ALWAYS TEST 1ST IN A INCONSPICUOUS SPOT PRIOR TO TREATMENT.****

NOTE: OIL DAMAGE, BODILY FLUIDS, INK STAINS, NU-BUCK & SUEDE LEATHERS, CAN NOT BE TREATED THIS WAY. THIS APPLICATION MAY MAKE THE PROBLEM WORSE. PLEASE CONTACT A PROFESSIONAL LEATHER TECHNICIAN PRIOR TO APPLICATION. LEATHER TREATMENT SHOULD DONE BY A LEATHER REPAIR TECHNICIAN. FOR THAT REASON, RAY'S LEATHER REPAIR & RESTORATION CAN NOT BE HELD LIABLE FOR ANY MISUSES OR DAMAGES CAUSED BY THESE PRODUCTS.

Conditioning: Ray's conditioner comes in a clear bottle and is **not** concentrated. It is yellow in color and has a slight odor. Saturate a non-fibered small rag or towel (i.e. terry cloth, blue shop rags or shamwow) and ring out slightly. Keep in mind a little conditioner goes a long way. Lightly wipe down the entire leather evenly. Work on one panel at a time, making sure it is evenly absorbing. This is very important with natural, or semi-aniline leathers. If **not** applied evenly it can cause spots or stains. Please consult a professional leather technician "**prior to application**" if you have any questions or concerns. ****ALWAYS TEST 1ST IN A INCONSPICUOUS SPOT PRIOR TO TREATMENT.**** The conditioning process can take between 8 to 24 hours at room temperature to fully absorb. We recommend conditioning your leather before you go to bed at night. In the morning, wipe the leather down with warm water well rung out on a non-fibered rag. Let air dry for another 2 to 4 hours. If the leather still feels slightly sticky, give it a few days. It may have been too cold during application or your leather just needs more time to soak in.

NOTE: STILL UNCERTAIN? DON'T HAVE THE TIME OR THE ENERGY TO DO THIS YOURSELF? CONTACT RAY'S LEATHER REPAIR FOR AN ESTIMATE TO HAVE YOUR LEATHER PROFESSIONALLY CLEANED & CONDITIONED!
