

# TECHNICAL DETAILS

*Working together to make your event great!*

PREPARING FOR US

## WHAT YOU NEED TO KNOW

Edu-Corp is in the business of serving you. You will find that we are not very fussy and are willing to work in a variety of different circumstances. We will even change things up on the fly to ensure your guests have a great experience. Need us early in the morning for a TV promo, or radio show.... No Problem. Need us to put on a last minute program for special needs kids... No Problem. Need us to wake you up, cook your breakfast and clean your house...Problem! We are lousy cooks!

## PROGRAM SPECIFICATIONS

### Comedy Science Shows

Our needs are similar to what a magician would need for a typical magic show. Guests can sit on the ground, in chairs or in the bleachers. The show is very visual and can easily accommodate groups from five to five hundred. If there is no formal stage area, then a footprint of 10 x 20 feet (or larger) with access to electricity will be needed. If the event is outdoors then a tented area is best in case of rain, snow, hail or god-like creatures attacking from space. 1 Table is also needed (a good shield against aliens).

*Cool Finale Option* - If you would like to add a super visual finale to any show, may we suggest DRY ICE. If you can get your hands on some (get it donated daily), it will get incorporated into the show. 10lbs of nuggets per show would create a really cool effect.

### Dr. Bones Shows

Similar foot print size as for the Comedy Science Show. Any kids and/or family stage area is good. For multiple day shows, we need a secure place to leave the skeleton overnight. If there is no formal stage area then a 10 x 20 area (or larger), with access to electricity will be needed. A secured tent with removable walls is perfect. If you want to help dress up the area, hay-bales (as many as you can) add a nice touch and could be used for seating.

### Dr. Bones Exhibit (Static or Movable)

**Static:** a 10 x 20 space is needed that can be secured overnight.

**Movable:** as long as there is pavement, we can move it... grass is a little tough. However, we need a place to secure the skeleton overnight. After allowing him to watch "Night at the Museum", we want to avoid panicking your guest by having him wander off. No worries of him spooking other horses, as only Elephants recognize their own bones. (true fact)

*\*\*\*No power or sound is needed for these programs.*

### Streak-It / Wacky Hair Spray

**Static:** A 5 x 5 foot area (more or less) is needed. We've shared many spaces with face painters etc... Ideally, outdoors unless we are in a very large convention center.

**Movable:** No footprint needed at all. We move around the fairgrounds all day long. Both options require a safe and secure area to store supplies.

*\*\*\*No power or sound is needed for these types of programs.*

### Dino-Scareus

It's like a Mascot—We walk around. We need a secure dressing room to store Dinosaur.

## SOUND SYSTEM (Shows Only)

Depending on the type of show, a sound system may be required. For small groups we prefer to use our natural voices. If we are traveling to you by plane, and sound is needed (i.e. larger shows), we will bring our own headsets but will require you to have a sound technician. If we are traveling by car, we can bring our own sound system.
