

**Short band, Inset and Stepped Bands**

Where phosphor bands are short inset or stepped they are described as such in the text. Most are self-explanatory but some illustrations are provided here to assist readers. Please note that all short and inset bands **must** be clear of the normal perforations (not necessarily the elliptical perforations) to qualify for inclusion in this catalogue.

Centre band short at top

Left band short at bottom

Left band inset

Both bands inset

Left stepped at top

Right stepped at bottom

**Phosphor band layout - 2 Band Stamps**

Band width

Space between bands

On 2 band stamps the phosphor is printed across the perforations as shown here. The *overall* width of the phosphor band is given in the subheadings

As the phosphor bands are seldom registered exactly the precise band width should be determined by measuring the space *between* the bands (in millimetres) and subtracted from 21mm - the width of the stamp.
