

GIZA PLEIADES STAR MAP I

The purpose of this illustration is to suggest that the entire core of the Giza Pyramid complex in Egypt is construed to mirror the Cydonia, Mars pyramid complex. After all, Cairo which is adjacent to Giza means *Mars* and it is associated with the God Ares or the God of War. What this study suggests is that the entire Martian motif corresponds to entire Giza pyramid complex with the 3 main structures of Cydonia in Mars. The Martian motif is made up of 3 main structures to include the Face of Mars, or that of Ala-lu, the 7 main structures of the Pleiadian Pyramid City and the Pentagon Pyramid. These structures are approximately replicated onto the Giza pyramid complex when superimposed from a top view. Both the Earthly and Marian layouts also correspond to the northerly direction although the reflected motif on Giza is inverted 180 degrees and rotated about 72 degrees. The various ley-lines of each also corresponds to similar angles and degrees. There are a few slight variations that will be noted.

FACE OF ALA-LU

D&M PYRAMID

On the Giza configuration, this star, *Asterope* is on the very ley-line of the inverted triangular base that construes the hexagram of the entire motif. Perhaps there is a corresponding structure there buried in the sands of time that needs to be excavated and that could be shown to be some sort of 'Stargate' perhaps. The star *Taygete* corresponds to the Sphinx. The star *Atlas* corresponds to the smaller of the 2 pyramids, Menkaure or Mintaka of Orion. The star *Alcyone* which is the most prominent star of the Pleiades corresponds to the southeast corner of the 2nd Pyramid, Khufu or Alnilam of Orion.

PYRAMID CITY CYDONIA, MARS

ORION'S BELT PLEIADIAN PATTERN

The star *Merope* correlates to the half-way point between the Great Pyramid, Khafre or Alnitak of Orion and the 2nd Pyramid and is on the 45-degree slope ley-line. Then the star *Electra* corresponds to the southeast corner of the Great Pyramid and so on.

The 5 points of the pentagram corresponds to the corners of the 3 pyramids of Giza, the Sphinx and the ley-line of the inverted triangle that constitutes the hexagram. At the core of this geometric pentagram is the star Maia that correlates to the Tomb of Osiris. Directly south of the *Maia* star correspondence is the star *Asterope*. This star is said to be the 'gateway' star that leads to the core of the Pleiades.

As to the Martian motif over Giza, the Face of Mars corresponds to an oval-like configuration made in the desert and to the west of the motif. The Pentagon Pyramid corresponds to a patch of greenery land in a pentagram outline to the east. By far the most interesting aspect of this Martian motif superimposed on the Giza Plateau is that of the Pleiades Pyramid City that corresponds to the 3 pyramids of Giza. The Pleiadian star cluster is corresponding exactly in sync with the geometry and angles of the 3 pyramids which are Khafre or the Great Pyramid, Khufu and Menkaure. The approximate length the 3 pyramids corresponds so the length or span of the Pleiades star cluster. In turn the Giza 3 pyramids comprise an encrypted pentagram as it does on the Martian Pleiades Pyramid City.
