

C20™ Enhances Grass Establishment

Case Study #13:

“Feed the soil microbes that feed your plants”

Manhattan 5 rye grass seed was applied to a damaged section of lawn (Figure 1) and then covered with a thin layer of C20™ (Figure 2). Within five weeks the damaged area was completely filled in and was greener than the rest of the lawn (Figure 3).

C20™ builds the soil and the roots of grass quickly exploit the new soil environment creating thicker, greener and more stress resistant plants.

C20™ is ideal for treating trees, shrubs, turf and flowering plants in yards, gardens and landscapes.
