

Fab Tech's Full Radius Scum Trough Solves Skimming Issues

Fab Tech's full radius scum trough upgrade can eliminate skimming or blanketed sludge issues. With a full radius collection system in place your clarifier can collect and remove sludge at a much more efficient rate. This upgrade is fully designed by Fab Tech Wastewater Solutions and can be fitted to almost any clarifier. This upgrade is the most cost effective method to improving clarifier efficiency without any major alteration to your equipment. Fab Tech has helped wastewater plants save money with the full radius scum trough upgrade when the maintenance staff originally thought a full clarifier replacement was needed.

The full radius scum trough features a much larger collection area, causing more sludge to be removed with each pass. Also our trough features less components and a more straight forward design compared to most collection mechanisms making maintenance easy and inexpensive. Fab Tech has extensive experience repairing and upgrading circular clarification units, all installation is performed by our trained field service personnel.
