Price: \$2,500

Outboard Motor for Ice Boats

Designed and built by Jack Jacobs

Husquvarna 48 inch chain saw motor and chain (no blades) power a 20 inch solid rubber tire with long (non-sharp) spikes to motor an iceboat across the ice sheet. Motorcycle throttle comes up to the cockpit so the sailor can control the machine. Mounts to a runner plank.

Jack Jacobs built about a dozen of these, many of which are in active use. Ron Sherry of Composite Concepts and successful DN racer sold several of these motors and may still have his own.

During the 1992 Spring Frolic on Lake Winnepesaukee, when the wind died down, Jack Jacobs and Bill Sarns were seen zipping across the lake back to Wolfeboro Bay with these outboard motors while the rest of the fleet was being pushed and pulled back to Wolfeboro.

Price: \$1,500
