

A BUILDER YOU CAN TRUST

- ✓ exceptional value
- ✓ impressive design
- ✓ quality construction

DID YOU KNOW? Most non-custom home builders use inexpensive 2x10" lumber for its floor joists. Instead of using the common 2x10", as part of Sun Porch Homes' dedication to quality construction, we use a high-performance engineered floor system known as an I-joist. Although the material cost is more than double, I-joists are a special high-end engineered product, which strengthens your floor so its less likely to bow, twist or spit, compared to conventional budget-minded 2x10". I-joists' dimensional soundness and little or no shrinkage help eliminate squeaky floors.

Sun Porch Homes delivers to our home buyers Exceptional Value, Impressive Design and Quality Construction.
