

Your Annual Drinking Water Quality Report For City of Tawas City

January 1, 2019 - December 31, 2019

Dear Customer:

We're pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are wholly committed to ensuring the quality of your water.

Where does our water come from?

The source of our water is Lake Huron; the intake structure is located approximately 1 mile off shore at a depth of approximately 40 feet. This water source has been in use since 1992 and is considered to be of the highest quality.

The water is then treated via a very effective and unique process designed to reduce, remove or destroy contaminants in the source water. This processing takes place at our facility located at 247 S. Baldwin Resort Rd. and is owned by the **Huron Shore Regional Utility Authority (HSRUA)**. The water treatment plant is staffed by MDEQ-certified professional water treatment specialists who in addition to formal education and job-related courses, keep current on ever-changing technology and regulations by attending continuing education courses, workshops, and seminars. As you will see in the following information, we monitor our lake water and drinking water supplied to you very closely to ensure its quality.

The State of Michigan has completed a Source Water Assessment Report (SWAR) for our water system. Included in the SWAR is the susceptibility ranking for our intake. The ranking is based on several factors, including intake location, depth, water chemistry, and contaminant sources. Based on the report, our intake has a moderate degree of sensitivity to potential contaminants. The potential contaminant sources have a minimal influence over the intake. This minimal contaminant threat combined with the moderately sensitive intake yields a moderate susceptibility determination for the HSRUA intake. If you would like to review a copy of the complete report, please contact your Local Township.

Tawas City wants their customers to be informed about their water quality and will be glad to answer any questions pertaining to your water supply. If you as a customer are confused or feel misinformed, give your utility the opportunity to clarify things.

We routinely monitor your drinking water for contaminants according to federal and state laws. The following tables included with this report show the results of our monitoring for the period of January 1 to December 31, 2019. Sample results that are more than five years old need not be included in the report, even if it is the last available data for the supply (e.g., some metals are collected on a nine-year frequency). All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency Safe Drinking Water Hot Line at 1-800-426-4791.

It's our pleasure to report that in 2019 as in all years past, the water delivered from the water treatment plant met or surpassed all federal and state standards for quality.

If you wish to obtain a copy of this report contact your Township Hall listed at the end of this report. If you have questions concerning the contents of this report or the water utility, contact:

Catherine Winn
HSRUA Superintendent
989-362-0050
247 S. Baldwin Resort Rd.
East Tawas, MI 48730

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) - The concentration of a contaminant that if exceeded triggers treatment or other requirements that a water system must follow.

Environmental Protection Agency (EPA)

Food and Drug Administration (FDA)

Maximum Contaminant Level (MCL) - The "Maximum Allowed" is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that the addition of a disinfectant is necessary for control of microbial contaminants

Maximum residual disinfectant level goal (MRDLG)- The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Michigan Department of Environmental Quality (MDEQ)

Nephelometric Turbidity Unit (NTU) - Nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Not regulated (NR) - The substance is not currently regulated by the USEPA and or MDEQ. Monitoring helps EPA to determine where these contaminants occur and whether there is a need to regulate them.

Not applicable (NA)

Not Detected (ND)

Parts per million (ppm)

Parts per billion (ppb)

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

The table contain the only drinking water contaminants we detected in the year 2019. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report.

HSRUA - Water Treatment Plant							
PRIMARY STANDARDS – Required sampling for substances which have federally enforced regulations, these substances are directly related to the safety of drinking water.							
Inorganic/Organic Chemicals	Sample Date	MCLG	MCL	Result	Range of all Results	Violation	Likely source
Nitrate ppm	8/28/19	10	10	ND	N/A	No	Erosion of natural deposits, Runoff from fertilizer, septic leakage
Gross Alpha pCi/L	2016	0	15	1.0	N/A	No	Decay of natural radioactive elements
Combined Radium pCi/L	2016	0	5	0.67	N/A	No	Decay of natural radioactive elements
Fluoride ppm	8/28/19	4	4	0.61	N/A	No	Water additive to protect teeth
TOC	Sample Date	MCLG	MCL		Range of all Results	Violation	Likely source
TOC ppm	Quarterly	N/A	TT		1.22 – 1.71	No	Naturally present in the environment
Turbidity	Sample Date	MCLG	MCL/TT	Highest Result	Range of all Results	Violation	Likely source
NTU Filtered Water	Daily	N/A	TT = 1	0.09	0.04 – 0.09	No	Soil run-off
% of samples Filtered Water	Daily	N/A	95% <0.3NTU	100.0 %	N/A	No	Soil run-off
Microbial Contaminants	Sample Date	MCLG	MCL		Detected	Violation	Likely source
Total Coliform	Daily	0	>1 positive monthly sample, >5% of all samples		0	No	Naturally present in environment
E. Coli	Daily	0	>1 positive routine & repeat samples		0	No	Naturally present in environment
ADDITIONAL MONITORING – Required and non-required sampling for substances that do not have federally enforced regulations, these substances are not directly related to your health. They reflect aesthetic qualities such as taste, odor and appearance.							
Sampled at Plant Tap	Sample Date	MCLG	MCL	Average Result	Range of all Results	Violation	Likely source
Sodium ppm	8/28/19	N/A	N/A	7	N/A	No	Erosion of natural deposits
Chloride ppm	8/28/19	N/A	250	8	N/A	No	Erosion of natural deposits
Sulfate ppm	8/28/19	N/A	250	16	N/A	No	Naturally occurring mineral
Sampled at Plant Tap	Sample Date	MCLG	MCL	Average Result	Range of all Results	Violation	Likely source
Fluoride ppm	Daily	4	4	0.67	0.56 – 0.78	No	Erosion of natural deposits, water additive to protect teeth. Alpena is a Fluoridated system.
pH	Daily	N/A	6.5 – 8.5	7.27	7.13 – 7.40	No	Naturally occurring elements
Hardness CaCO3 ppm	1/ Week	N/A	N/A	100	90 – 116	No	Naturally occurring elements
Alkalinity	Daily	N/A	N/A	70	63 – 84	No	Naturally occurring elements

City of Tawas City – Distribution System							
Copper & Lead	Sample Date	MCLG	AL	90 th Percentile	Range of all Results	Violation	Likely source
Copper (ppm)	2017	1.3	1.3	0.30	0.06 – 0.31	No	Corrosion of household plumbing
Lead (ppb)	2017	0	15	2	ND – 2	No	Corrosion of household plumbing erosion of natural deposits
Disinfectant By-Products	Sample Date	MCLG	MCL	Result	Range of all Results	Violation	Likely source
TTHMs (ppb)	2019	N/A	80	36.0	N/A	No	Disinfection By-product
HAA5 (ppb)	2019	N/A	60	13.0	N/A	No	Disinfection by-product
Disinfectant Residual	Sample Date	MRDLG	MRDL	Quarterly RAA	Range of all Results	Violation	Likely source
Free Chlorine (ppm)	2019	4.0	4.0	0.70	0.10 – 1.24	No	Disinfectant added to control microbes.
Microbial Contaminants	Sample Date	MCLG	MCL	Detected	Violation	Likely source	
Total Coliform	2/month	0	>1 positive monthly sample, >5% of all samples	0	No	Naturally present in environment	
E. Coli	2/month	0	>1 positive routine & repeat samples	0	No	Naturally present in environment	

The City of Tawas City has 1,007 active service lines. A total of 908 service lines are of unknown materials, and of those 42 service lines likely contain lead and 57 service lines neither contain lead nor galvanized previously connected to lead. The City of Tawas City has zero service lines that are known to be lead.

Important Information About Lead

If present elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with services lines and home plumbing. HSRUA is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using your water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800-426-4791) or at <http://www.epa.gov/safewater/lead>.

UNREGULATED CONTAMINANTS – Required sampling for substances which the EPA requires monitoring but has yet to establish standards. Monitoring helps the EPA determine where these contaminants occur and whether regulation is warranted in the future.							
Sampled at Plant Tap	Sample Date	MCLG	MCL	Average Result	Range of all Results	Violation	Likely source
PFAS ppt	2019 Monthly April – September	N/A	N/A	ND	ND	No	Chemical used in industrial processes and consumer products.
PFOS ppt	2019 Monthly April – September	N/A	N/A	ND	ND	No	Chemical used in industrial processes and consumer products.
PFOA ppt	2019 Monthly April – September	N/A	N/A	ND	ND	No	Chemical used in industrial processes and consumer products.

Additional information about unregulated contaminants can be found here: www.epa.gov/dwucmr

What are Per- and polyfluoroalkyl substances (PFAS) and why are they harmful?

Per- and polyfluoroalkyl substances (PFAS), sometimes called PFCs, are a group of chemicals that are resistant to heat, water, and oil. PFAS have been classified by the U.S. Environmental Protection Agency (EPA) as an emerging contaminant on the national landscape. For decades, they have been used in many industrial applications and consumer products such as carpeting, waterproof clothing, upholstery, food paper wrappings, fire-fighting foams, and metal plating. They are still used today. PFAS have been found at low levels both in the environment and in blood samples of the general U.S. population.

These chemicals are persistent, which means they do not break down in the environment. They also bioaccumulate, meaning the amount builds up over time in the blood and organs. Studies in people who were exposed to PFAS found links between the chemicals and increased cholesterol, changes in the body's hormones and immune system, decreased fertility, and increased risk of certain cancers.

Are there health advisory levels?

The EPA has not established enforceable drinking water standards, called maximum contaminant levels, for these chemicals. However, EPA has set a lifetime health advisory (LHA) level in drinking water for two PFAS: perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS). The PFOA and PFOS LHA is the level, or amount, ***below which no harm is expected from these chemicals***. The LHA level is 70 parts per trillion (ppt) for PFOA and 70 ppt for PFOS. If both PFOA and PFOS are present, the LHA is 70 ppt for the combined concentration.

The amount of PFOA and PFOS combined in the samples collected from the HSRUA water treatment plant tap was ND (not detected based on the laboratory's analytical report). There are many other PFAS compounds that currently do not have LHA levels. For information on PFOA, PFOS and other PFAS, including possible health outcomes, you may visit these websites: <https://www.epa.gov/pfas>; <http://www.michigan.gov/som/pfasresponse>; or www.atsdr.cdc.gov/pfas.

Who can I call if I have questions about PFAS in my drinking water?

If any resident has additional questions regarding this issue, the State of Michigan Environmental Assistance Center can be contacted at 800-662-9278. Representatives may be reached to assist with your questions Monday – Friday, 8:00 AM to 4:30 PM. You may also contact HSRUA at 989-362-0050.

Is it safe to eat fish in these areas?

Wild fish samples are being collected from local lakes and rivers. These samples will be analyzed to determine the levels of PFAS in fish and make recommendations on how much is safe to eat. Some information is already available in the State of Michigan Eat Safe Fish guides, which are available at <http://www.michigan.gov/eatsafefish>.

May I bathe or swim in water containing PFAS?

Yes, information currently available suggests that this is not a major contributor to overall exposure.

How can PFAS affect people's health?

Some scientific studies suggest that certain PFAS may affect different systems in the body. The National Center for Environmental Health (NCEH)/Agency for Toxic Substances and Disease Registry (ATSDR) is working with various partners to better understand how exposure to PFAS might affect people's health.

If you are concerned about exposure to PFAS in your drinking water, please contact the MDHHS Toxicology Hotline at 800-648-6942 or the CDC/ATSDR: <https://www.cdc.gov/cdc-info/> or 800-232-4636. Currently, scientists are still learning about the health effects of exposures to PFAS, including exposure to mixtures.

What other ways could I be exposed to PFOA, PFOS and other PFAS compounds?

PFAS are used in many consumer products. They are used in food packaging such as fast food wrappers and microwave popcorn bags; waterproof and stain resistant fabrics such as outdoor clothing, upholstery, and carpeting; nonstick coatings on cookware; and cleaning supplies including some soaps and shampoos. People can be exposed to these chemicals in house dust, indoor and outdoor air, food, and drinking water. There is still uncertainty regarding these routes of exposure and more research is necessary.

What is being done about this issue?

State and local agencies are actively working to obtain more information about this situation as quickly as possible. Additional testing of the drinking water will be conducted to demonstrate that the PFAS levels are consistent and reliably below the existing LHA. Additional monitoring in and around our region and other affected areas will also be performed by the Michigan Department of Environmental Quality, which will help us answer more questions and determine next steps.

How can I stay updated on the situation?

The state has created a website where you can find information about PFAS contamination and efforts to address it in Michigan. The site will be updated as more information becomes available. The website address is <http://michigan.gov/pfasresponse>

Tawas City is proud that your drinking water meets all federal and state requirements. We have learned from our monitoring and testing that some contaminants have been detected but are well within the standards. The EPA has determined that your water is safe at these levels.

Information for people with special health concerns

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hot Line (800-426-4791).

The sources of all drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- **Organic Chemical contaminants**, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production in mining activities.

In order to ensure that tap water is safe to drink, the **EPA** prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. **FDA** regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

There is nothing more important to our community than quality drinking water. The maintenance and expansion of the treatment facility and distribution system has and will continue to be important to the growth and welfare of Iosco County.

We will continue to work around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life, and our children's future.

Opportunities for Public Participation:

We believe that informed citizens can be strong allies of water systems as they take action on pressing problems. The following is a listing of meeting dates and locations where your elected officials may discuss water system issues.

Water Supplier	Regular Meeting Schedule	Time/Location/Contact
City of Tawas City	1 st and 3 rd Monday of each month	<p style="text-align: center;">7:00 p.m. Tawas City Hall 550 W Lake Street Tawas City, MI 48764 989-362-8688</p>
Huron Shore Regional Utility Authority	1 st Tuesday of each month	<p style="text-align: center;">9:00 a.m. HSRUA Treatment Plant 247 S. Baldwin Resort Road East Tawas, MI 48730 989-362-0050</p>

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Monitoring Requirements Not Met for the City of Tawas City

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During August 1 to August 31, 2019, we did not complete all monitoring for Total Trihalomethanes and Haloacetic Acids and therefore cannot be sure of the quality of our drinking water during that time.

What should I do? There is nothing you need to do at this time. This is not an emergency. You do not need to boil water or use alternative source of water at this time.

The table below lists the contaminant(s) we did not properly test for during this time, how often we are supposed to sample for the contaminants and how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date we will collect follow-up samples.

Contaminant	Required sampling frequency	Number of samples taken	When all samples should have been taken	Date additional samples were (or will be) taken
Total Trihalomethanes	1 @ 12 months	0*	August 1 - 31, 2019	August 2020
Haloacetic Acids	1 @ 12 months	0*	August 1 - 31, 2019	August 2020

*A sample was taken for this contaminant during September 2019.

What happened? What is being done? We monitor our distribution system every 12 months for Total Trihalomethanes (TTHM) and Haloacetic Acids (HAA5). We did take a sample for TTHM and HAA5 in September 2019, but it did not count for compliance because it should have been taken in August 2019. Sampling can only take place during specific periods at specific sites. The results were well below the maximum contaminant level. We have taken steps to be sure to monitor for Trihalomethanes and Haloacetic Acids, as required.

For more information, please contact Mr. Gus Oliver by telephone at (989) 362-8688 or by mail at 550 Lake Street, Tawas City, Michigan 48764.

Please share this information with all other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this public notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Tawas City.

CERTIFICATION:

WSSN: 06540

I certify that this water supply has fully complied with the public notification regulations in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature:
