

Stickman No. 35[®]

(One-Hand PuzzleBox)

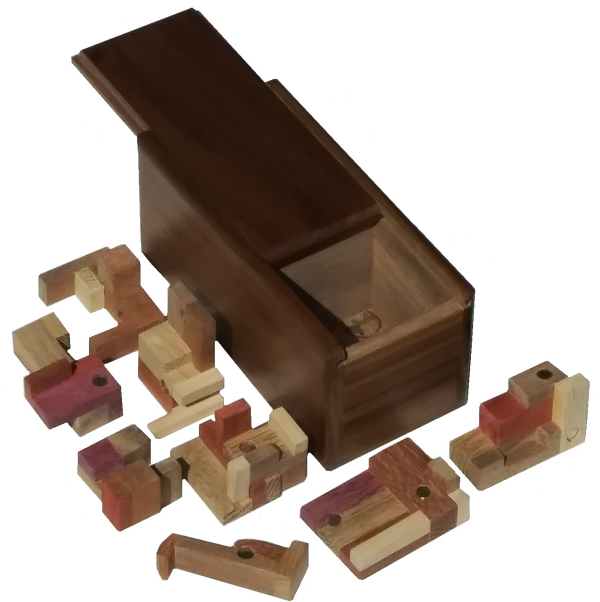

The Stickman “One Hand Puzzlebox” (No. 35) is crafted from walnut with exotic wood packing pieces. This puzzle is based on a concept by Asher Simon, and is Robert's tribute to the genera of packing puzzles. It is called the “One Hand Puzzlebox” because using a single hand is the most satisfying way of solving it.

Remove the packing puzzle pieces from one end of the box, and they flip around like a transformer robot. Pieces have to be separated and placed back into the compartment, one at a time, and in a particular order, just to get them back in. At times, combined pieces have to slide around with a satisfying “snap into place feel” to fit the others in. Upon proper completion, the second compartment will open. This also resets the puzzle pieces to transform once again the next time they are removed.

The puzzle is limited in edition to 160 boxes, and requires a minimum of 18 steps to solve properly. It measures roughly 6” x 3” x 3”, and is rated as “difficult” to solve correctly.

GOAL:

Lift the grenade pin to remove the packing puzzle from the box. The goal is to use a single hand to pack each piece individually back into the box, but do it with a different orientation that allows the second compartment to open when complete.

Limited Edition Status: Limited to 160 finished boxes.

Production Dates: July 2020 – May 2021.

Variations: Walnut and Yellowheart with inlay.

Number of Hidden Compartments: 1

Number of Steps: Minimum of 18

Difficulty Level: Difficult

Instruction Book: None (but formal solution provided on request).

Special Features: Irregular shaped magnetic packing pieces.

Goal: Solve packing puzzle one piece at a time to unlock second compartment.
