

8 August 2015

Thursday night David moving his muscles in bed. Stretching legs, & arms and shoulders. Turning head from side to side.

FRI 7th
TAR Aug, 2015

Friday morning we were called in. David had vomitted and some of it was on his lungs. Doctors were very concerned. David moved on to his front. Doc said it would be a "bumpy ride"

Friday evening Doc & sister spoke to Sue & Ruth. Said David was very very poorly. Problems with

circulation & low blood pressure.
Had maximum levels of support,
hanging on by a thread. We
were told to prepare ourselves
that this could be final
for David. After an hour
Sue & Ruth saw David, some
improvement.

8 Aug.

Saturday morning Sue & Ruth
expected the worst but David
had made more improvements
and was stable. Doctor & sister
very happy with his progress.
Said if he "went off" again they
would be able to help him.

Saturday night - Ruth & Sue
visited. David still stable,

bruises on eyes looked much much better. Nurse said they had given him some blood & he had been ok. Would probably leave him sedated for a couple of days.
