## Gold Star Sponsors

## The ASNT Acadiana Section Invite You and Your Co-Workers

**Meeting Date:** Tuesday, September 22, 2015

**Topic:** Real Time Radiography - Corrosion Under Insulation

**Guest Speaker:** Curt Auzenne / Topher Smith, QSA Global - SENTINEL™

### Real Time Radiography – (RTR) Live Video X-Ray

- Security
- Corrosion Under Insulation

Real-time radiography (RTR) is a well-established method of NDT having applications in aerospace, oil and gas, petrochemical, and munitions industries, among others.

#### Corrosion Under Insulation Inspection

Corrosion Under Insulation (CUI) inspection is a term used to address the inspection of areas that exist between the insulation material and the exterior wall of the pipe. Stripping down the insulation and searching for problem spots is a costly and time consuming process. The OpenVision™ system allows you to inspect lengths of pipe work, bends and joints in a matter of minutes, pinpointing any defects without removing the insulation.

#### Security Inspection

The Security Inspection using the OpenVision™ in hand held, an inverted position, or fully robot integrated, its ease of deployment allows for rapid x-ray inspection at different angles around the package. A portable DVR with an optional 150ft cable for remote hard wired viewing can be used to prevent EMR exposure to unattended packages.

## Meeting Schedule and Location

Ramada – Lafayette Conference Center  
2032 NE Evangeline Thruway  
Lafayette, LA 70501  
(337) 408-2810

(Mention ASNT Meeting – For Discounted Room Rate)

Social: 6:30 – 7:00 pm

Dinner / Technical Speaker 7:00 – Until

Dinner Cost - \$25.00 Cash / \$26.00 Credit Card
