The program, “Shrubs, Switchels and Oxymels” presented by Karen Cottingham. Hosts: Dena and Donna Yanowski. Bring your plate, cutlery, napkin and a dish to share.

Newsletter deadline: the 25th of every month

Members – If you would like to have your birthday remembered, and haven’t seen it announced, send an email to Linda Alderman at ewalderman@comcast.net
Hello May,

And certainly a big THANK YOU to all the growers, bakers, artists and creators, writers and behind the scene workers that allowed our 36th Annual Herb Day Luncheon and Symposium to be a success. It could not be done without all of the dedication and hard work of the members involved.

Thank you again and now we are looking forward to the Herb Fair the first Saturday in November.

Perusing the national Herb Society of America website I will share some of the information I read. I always enjoy reading about the Herb of the Month, but due to our deadline here, the May herb has not been posted yet. However, the Herb of the Month for April was Licorice, *Glycyrrhiza glabra*).

* Licorice is an herbaceous perennial with purple to lavender flowers; it is in the legume family and hardy to zone 6.

* The flavor is extracted from the root (stolon) of the plant that is preferably one that is 2 to 4 years old.

* Traditional healers in Egypt and Syria have used licorice medicinally for many generations. A large quantity was found in King Tutankamun’s tomb. It has also been used in Chinese medicine, Ayureda and by many Native American tribes.

A reminder that our May 15 evening meeting will be the Annual Members Meeting and will be at the Historic Club House, 6201 Hermann Dr.

We will be voting on the slate of officers presented by Sally Luna and the nominating committee, in addition to other orders of business. Members, please join us, with your table service and finger foods (as we are in the “rustic clubhouse”) to share for our potluck meal.

What’s Happening in our Unit!

Photos from Herb Day 2019
This is the third in the series about growing, harvesting and using our own herbs. I want to encourage every member with a garden to grow this plant for use in tea.

Mexican Mint Marigold (*Tagetes lucida*) also known as Sweet Mace, Mexican Tarragon, or Yerba Anise set in fall, just in time for Herb Fair teas. Be sure not to cut back the plant in the summer or you will lose the blooms. This plant grows about two feet tall and wide; coming up from around the bottom, so allow plenty of space around the base. It is not usually bothered by drought or pests.

The Latin name refers to its other *Tagetes* relatives, the marigold. Mint Marigold is a perennial, native to Central and South America and has been used as a seasoning herb, tea plant and medicinal in native cultures for more than a thousand years.

Due to its anise-like flavor it can be used like French Tarragon. You would use much less because its flavor is much stronger. It is Not related to French Tarragon (*Artemisia dracunculus* “Sativa”) at all. Its best flavor is from the fresh leaves, chopped and used in dishes like chicken salad, tossed green salads and even in a pesto over tacos. It dries quite well when the leaves are stripped and dried on paper. By volume, it is a large ingredient in our Texas Tea.
A wide variety of herbs that are used in our teas and blends are doing well in our gardens, and will continue to do well throughout the summer season. Many or our most useful herbs can be continually harvested as they become ready. This will be different in everyone’s garden. The idea is for everyone to harvest, dry and store them individually.

Dry on paper, store in airtight, labeled plastic bag, and keep it in the back of a cupboard or in the freezer. At some point, all the herbs will be combined together and made into our teas or herbal blends. Stay tuned for the next step!

Here is a short, and probably incomplete list of things that we can use in our products and should be ready to harvest… it’s not too late to plant them if you don’t have them.

- Mints
- All kinds of oregano
- Lemon or lime balm
- Lemon verbena
- Lemongrass
- Rosemary
- Sage
- Mexican Mint Marigold
- Comfrey (for skin products)
- Roselle

Thank you to the members who are now growing red-stem apple mint. I would like us to try two new herbs that might make great teas, holy basil (tulsi) and butterfly pea (the flower turns food blue!). The National Herb Society has holy basil and peach tea for sale on their website. We have recently heard a lot about the butterfly pea, it should like our climate and will be a great thing to offer people.

If you got some of the holy basil seeds at the March meeting, let me know how they are doing. I had NO success and plan to buy some plants. Donna Fay thinks that cuttings are the best way to go to get more holy basil out there. I have given out some butterfly peas seeds and have more ordered.

Back to Our Roots is a work in progress… thanks to all who are growing and harvesting… because it really is about use and delight!
Herbs Make Scents

What’s Coming Up Next?

Shrubs, Switchels and Oxymels
