

## Worm Tea

---

### Easy Steps for Making Worm Tea

1. Dechlorinate water by letting it sit for 24 hours or using a dechlorinating filter.
2. Put 2/3 cup of castings in muslin bag or sock. This will make 1 gallon of tea
3. Using a Stick or spoon knock the bag around for 1-2 hours, in the water bucket. This will release live microbes as well as other beneficial fertilizing properties. Do not use metal in this process.
4. Now you're ready to water plants as usual. Can also be used on lawn or to spray plants or trees that are having problems with fungus or pests. Use tea within 8 hours for best results.

\*Don't forget to put castings from the bag into the garden as there are still benefits.
